

Business Exchange Services (BES)

Overview

DXC's Proven Service – Business Exchange Services

- One of the largest, mature, B2B outsourcing solutions in the world
- “Challenger” – Gartner, Integration Brokerage Magic Quadrant, 2014; Ranked #2 – Gartner, Integration Brokerage Vendor Market Share, 2011 (*latest Gartner Integration Brokerage studies*)
- 25+ years of B2B and EDI expertise
- 160+ B2B professionals (average experience >13 years)
- 1,750+ clients in over 20 countries
- 160,000+ trading partners
- 3 Billion+ mission critical documents per year
- EDI and Integration skills
 - Multi-vendor consulting (OpenText/GXS, IBM Sterling, Seeburger, Axway, Software AG, Oracle, Edifecs, Sybase, etc.)
- Standard global delivery processes
- Service depth – consulting through operations
- Unsurpassed service excellence - leveraged, high-availability, 24x7 support

BES Serves Many Global Enterprises

DXC Internal Use Only

BES Solutions and Value Provided

bes-sales-support@dxc.com

Solution	Description	Key Value	Other Benefits
Managed File Transfer (MFT)	Connect reliably and securely to VAN and Internet trading partners	Cost Reduction - 40-80+% reduction in TCO of B2B communications	Reduced complexity; integrates seamlessly with most protocols
File eXchange Service (FXS)	Secure human-to-human file sharing	Eliminate security breaches of ad-hoc file transfers	Fast setup; high-speed ad hoc file transfers of large and confidential files
B2B Managed Service	Migrate B2B processing to DXC; send and receive ERP data over a single connection – DXC translates and connects the trading partners, and supports end-to-end	Cost reduction - 20-40% reduction in TCO of B2B operations	Op Ex vs. Cap Ex; modernization; standards, DRP; scalability
Portal & Trading Partner Enablement (P2P and O2C)	Web-based trading partner integration; digitizing inbound paper/fax, outbound multi-channel – Procure 2 pay /Order 2 Cash	Cost reduction through greater utilization of automated channels	Better partner relationships; lower overall supply chain cost
Trading Partner On-boarding and Management	Portal driven on-boarding campaign with highly automated methodology	Cost reduction through greater utilization of automated channels	Faster time to benefits; fewer errors
B2B Visibility	Mine and present B2B data for real-time dash board, exceptions, and decision support	Supply chain performance improvements (in stock, reduced freight, charge backs, vendor score card, etc.)	Program governance, staff productivity; customer satisfaction
eInvoicing (O2C side)	Portal bill presentment, country eCompliance (signature, tax IDs), PDF, email delivery	Legal compliance; reduced DSO (30-60%)	AR productivity; customer satisfaction
eInvoicing (P2P side)	Vendor bill consolidation (paper, fax, web, EDI), cleansing, country eCompliance (signature validation+), archiving	Cost reduction in Accounts Payable; reduced disputes affecting supply	Improved supplier relationships; audit readiness

B2B Challenges Typical in the Industry

- M&A activity leaves an B2B landscape of **under-utilized, fragmented and non-standard** B2B systems and operating environments
- **Outdated** and/or **un-supported** B2B software, lacking key features the business needs
- **Unable to scale**, extend, and/or add new trading partners or functionality as fast as needed
- **Inconsistent Security** policy implementation – security holes abound (FTP, clear text transfers)
- Weak or **non-existent Disaster Recovery** and Business Continuity plans and capability
- **Inconsistent monitoring** – lack of end-to-end process visibility, and resulting process failures (lost \$)
- **Inconsistent service levels** between different B2B programs in different parts of the company
- **Redundant staff** – B2B skills are scattered across people in too many different groups
- **Difficulty finding staff** with the right software skills
- Old VAN contracts with **costs well above current market pricing**
- Ineffective or **absent visibility** and governance – limited or no ability to provide B2B program oversight

PERFORMANCE

COST

The case for B2B Managed Service

What you get

- A **single global B2B** operating environment
- **Modern, flexible** B2B software
- Leveraged B2B “Center of Excellence” for **well-trained, available, best-shore staff**
- Built-in **redundancy and fail-over**
- Transparent **technology re-fresh**
- **Global governance**, control and visibility
- Effective **trading partner on-boarding** and management
- **Consistent service levels**
- **Consistent security policies**

PERFORMANCE

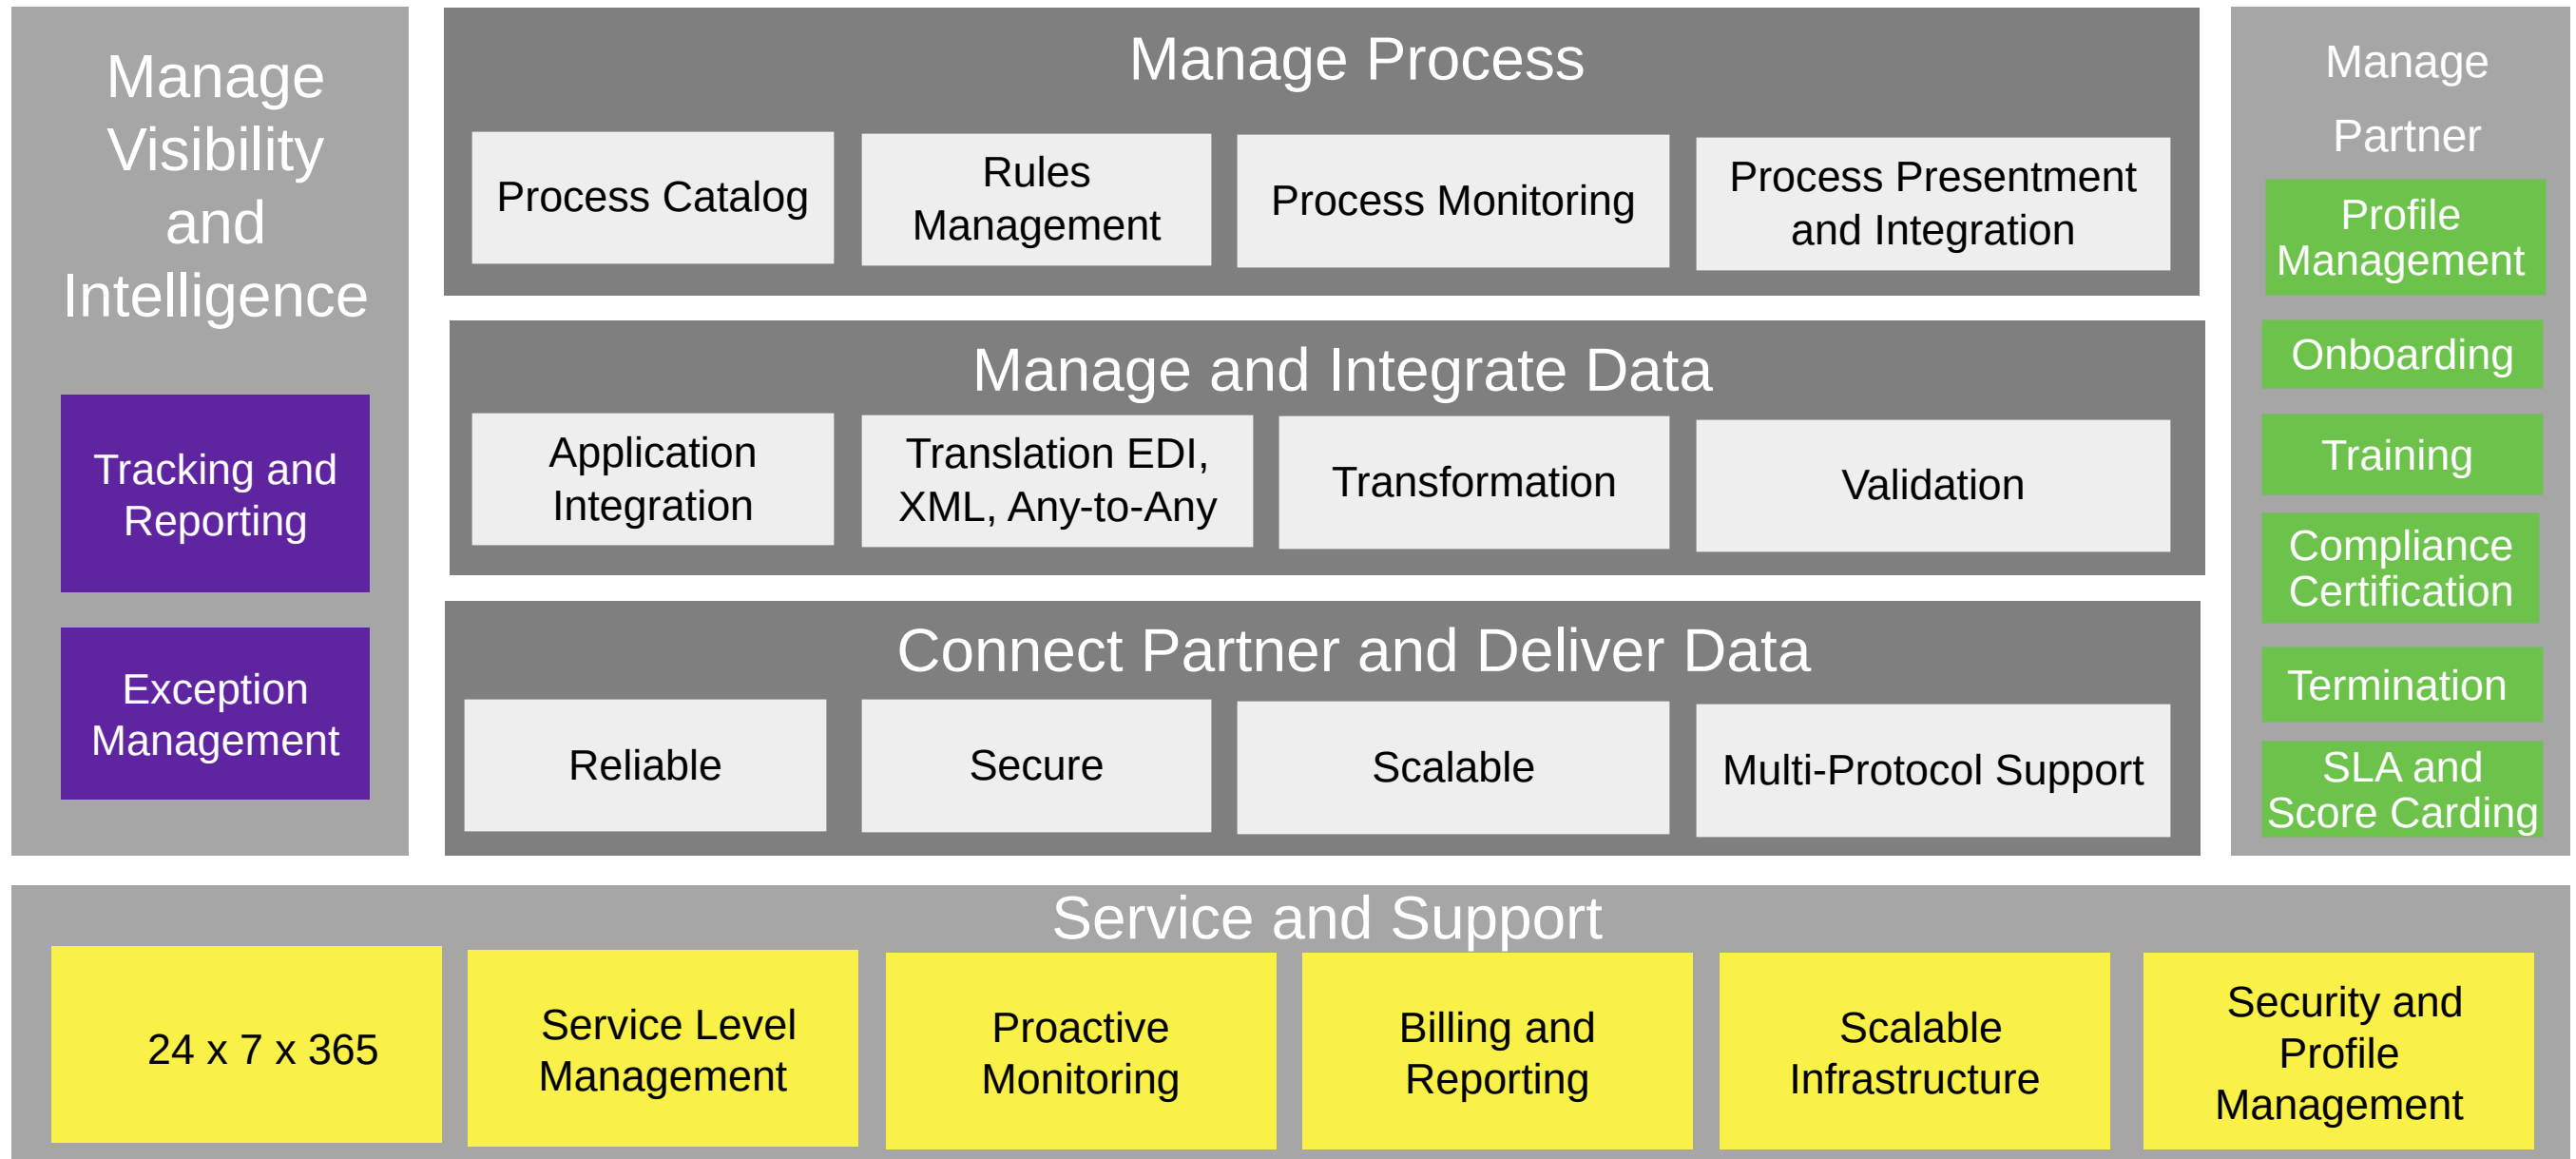

Why it matters

- **Lower TCO by 20-40%**
 - Better and leveraged utilization, eliminated capital expenditures (hardware, software), leveraged best shore staffing, and B2B traffic consolidation
- Better ability to **support growth** and new business requirements
- **Fewer process failures** – proactive monitoring and end-to-end visibility
- **Better overall performance** through a leveraged, scalable platform
- **Improved trading partner relationships**, and **happier internal and external customers**
- **Lower business risk** through consistent SLA, standard security practices and DRP

COST

BES B2B Framework – A Multi-Enterprise Collaboration Service

Data Centers/Hosting Facilities

Your Privacy and Security is our #1 Concern

Logical Security

- Root access restriction
- Server auditing/scanning
- National Computer Security Administration (NCSA) certified firewall security
- Firewall management
- Digital certificates
- Security socket layer (SSL)
- Hidden IP addresses
- Virtual private networks (VPNs)
- Vulnerability assessment scanning
- Real-time intrusion detection and response

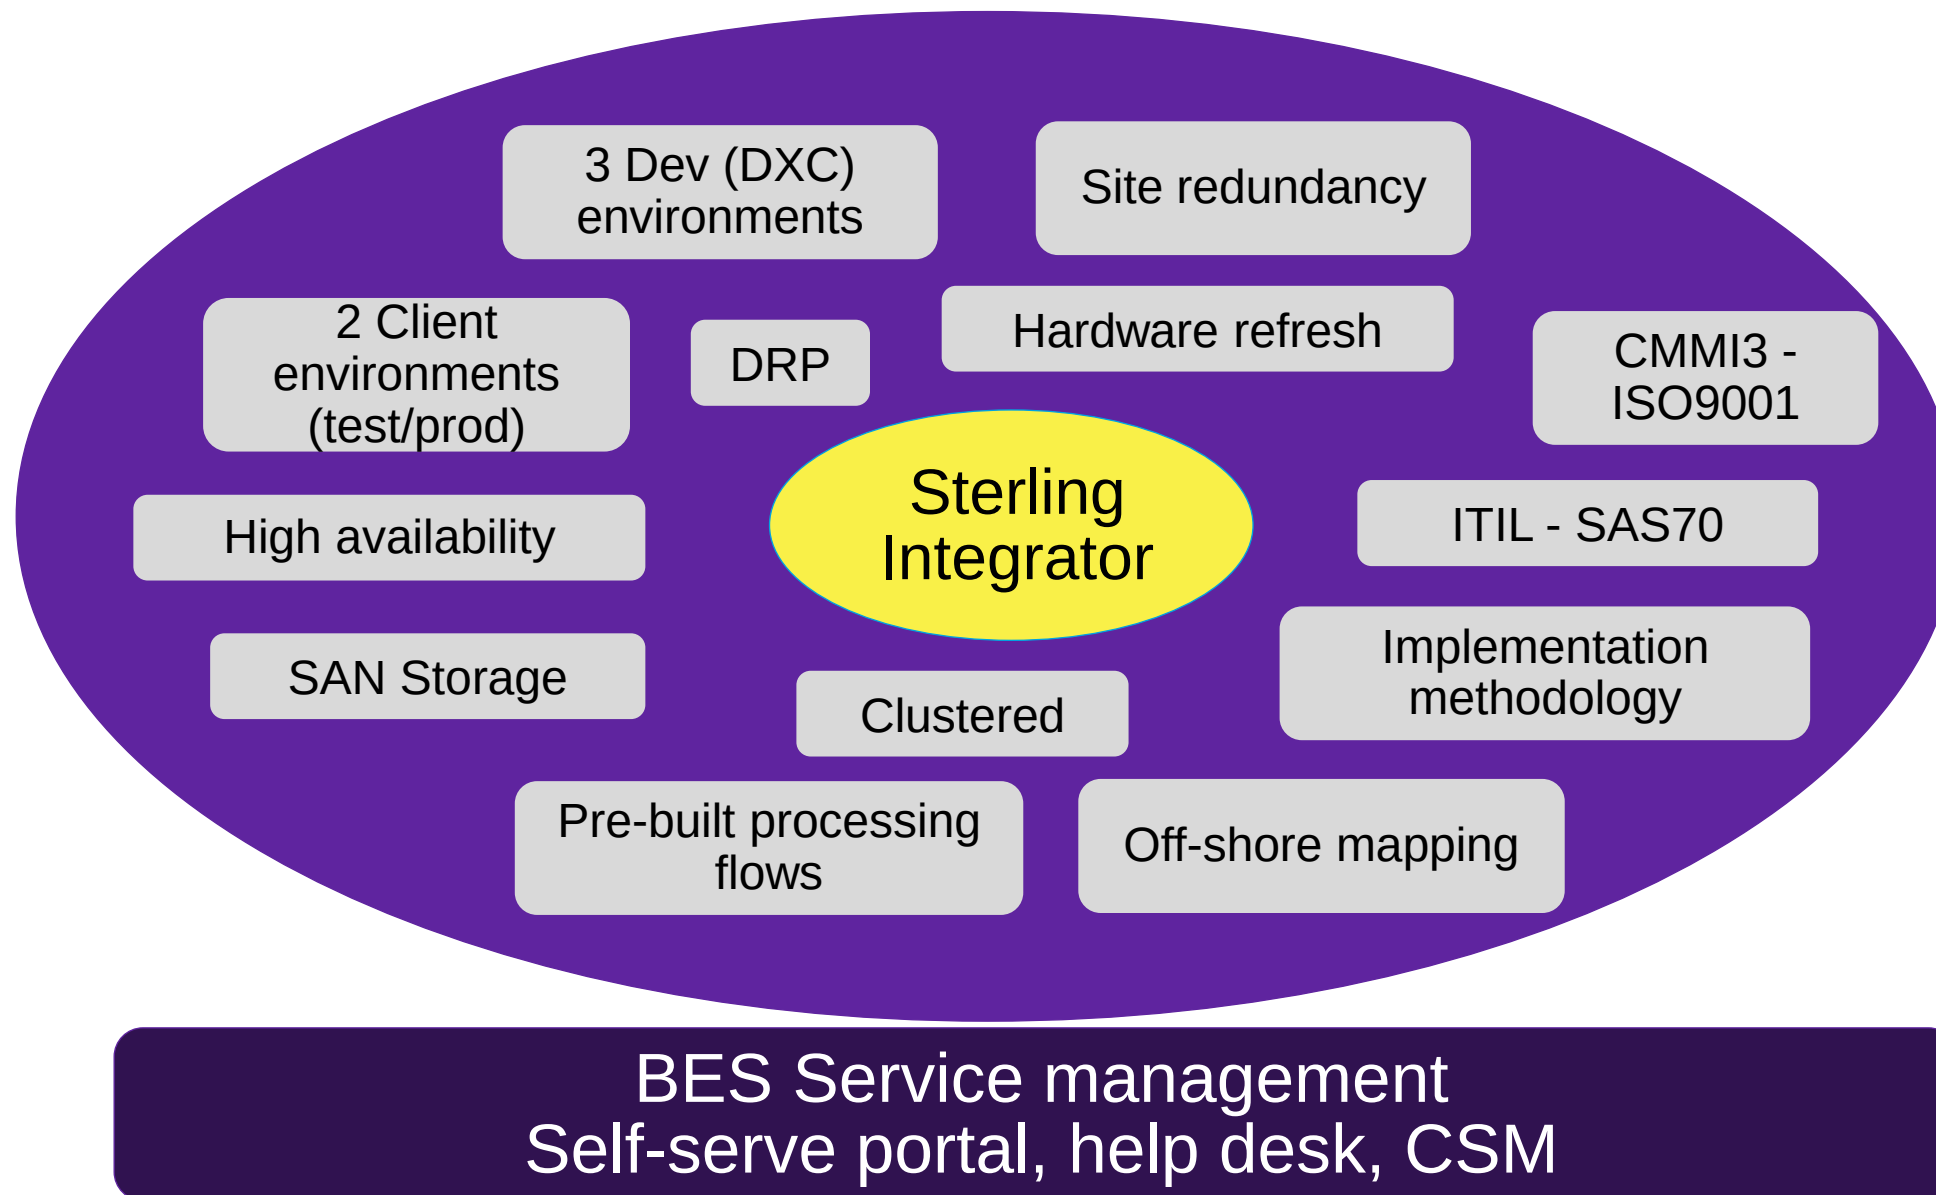

Physical Security

- Electronic and biometric controlled access
- Secure rooms
- Security personnel 24 hours a day, 7 days a week
- Fire and smoke detection and suppression
- Extensive disaster safeguards, preparations, and plans

Auburn Hills and Plano Data Center Specifications

- Auburn Hills raised floor: 117,935 sq. ft.
- Power source:
 - 2 utility substations
 - 9 – 1.5mW generators
- Plano raised floor: 243,861 sq. ft.
- Power source:
 - 3 utility substations
 - 6-3.2mW generators
- Dual path electrical and A/C systems
- Wind/storm protection: 130 mph winds

DXC Global Shared Platform (GSP)

Benefits

- Lower Total Cost of Ownership by 20%+
- Ability to scale up and down at will
- Better ability to support new business requirements
- Better overall performance by SLA
- Lower business risk and exposure
- Improved trading partner relationships, and happier internal and external customers

BES' Translation Platform

Data Processing System

- Translations processed within SB2Bi
- Pre and Post processes external to SB2Bi

Tracking and Reporting System

- External to SB2Bi
- Events provided by all application components

System Services

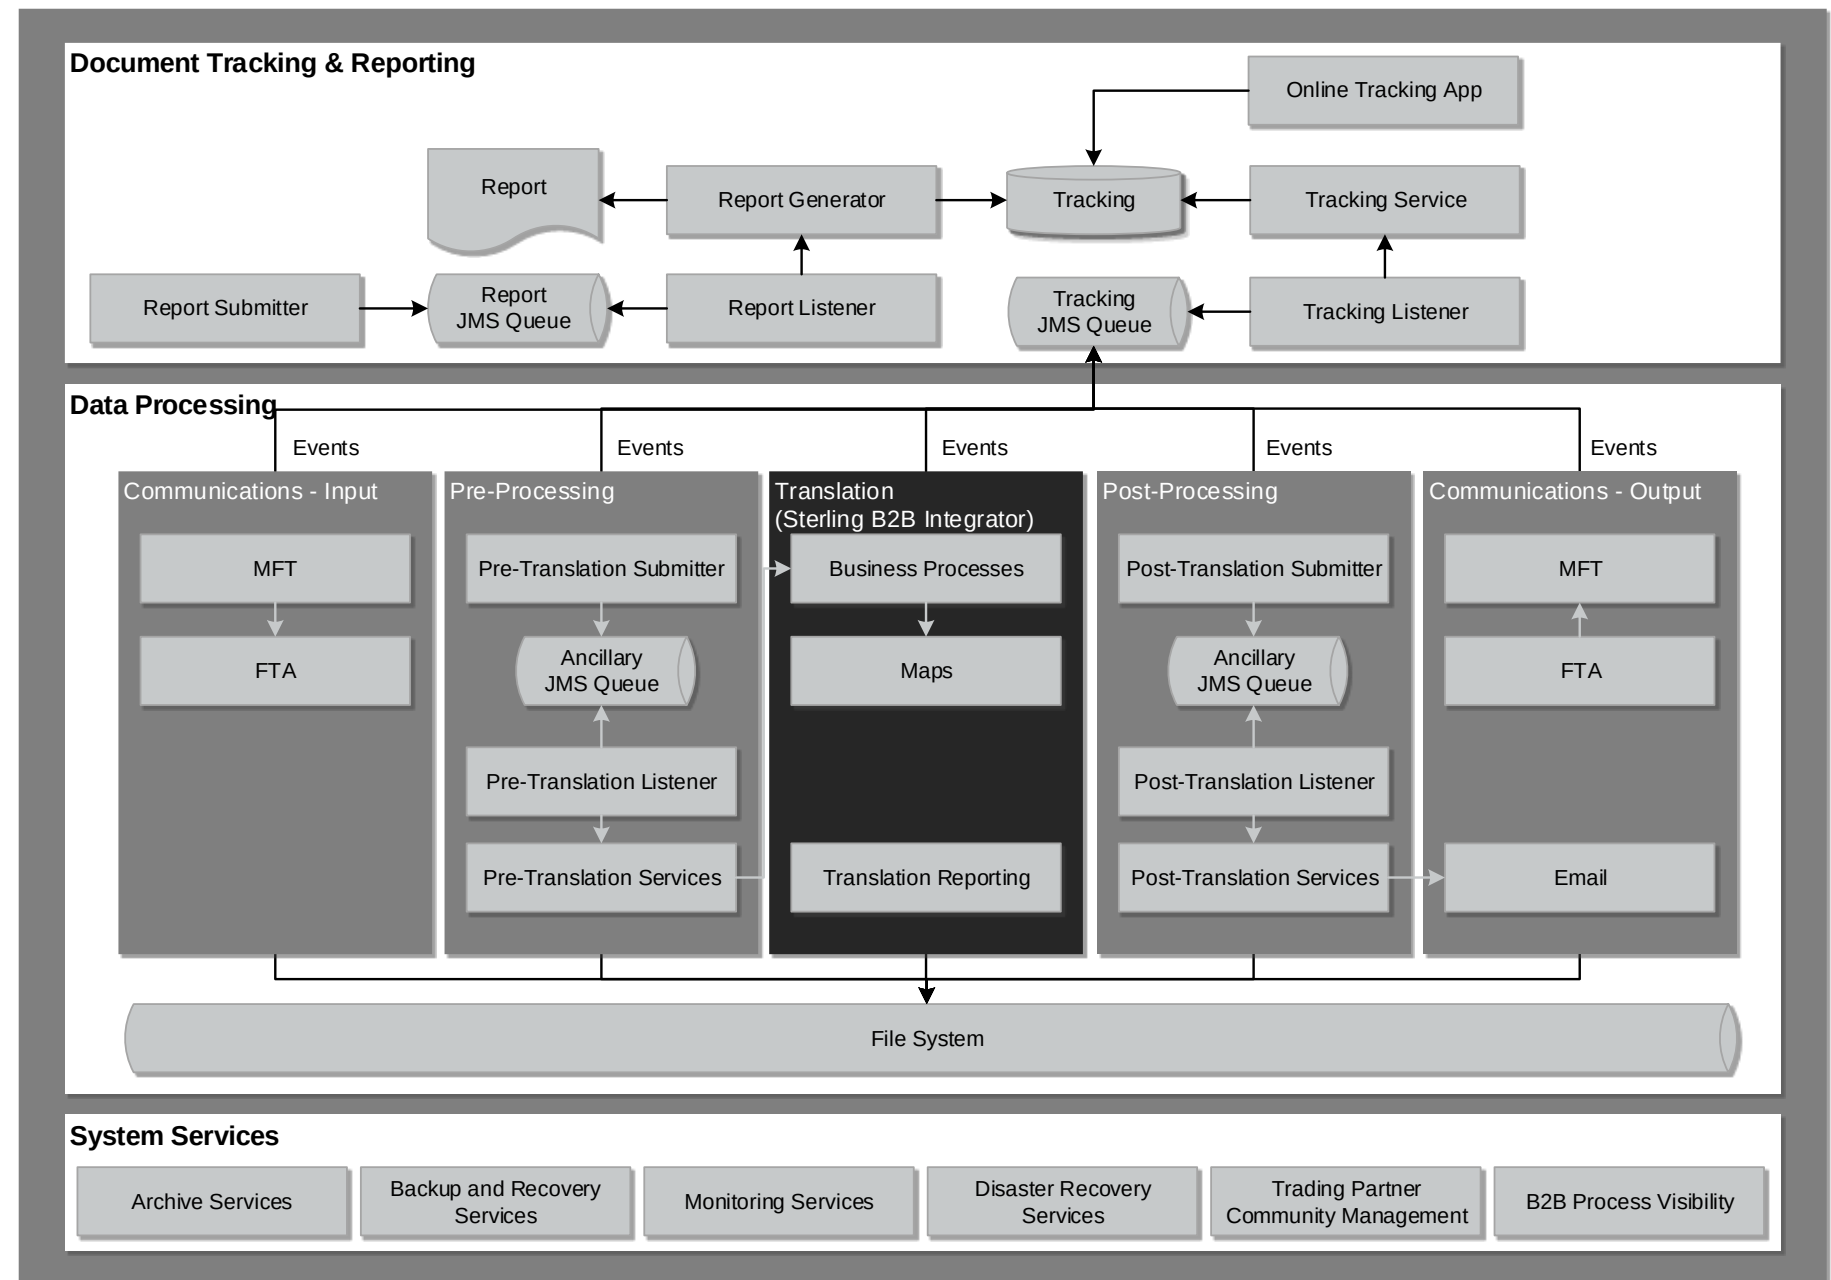

- Archive
- Backup and Recovery
- Disaster Recovery
- Monitoring

Optional Services

- Trading Partner Community Management
- B2B Process Visibility

Environments

- Production
- Model Office / Disaster Recovery
- Quality Assurance
- Integration
- Development

BES a-la-carte Services

BES File Exchange Service (FXS)

File eXchange Service (FXS) is a high-speed managed file transfer service to securely exchange content.

- Accessible via a web GUI¹, secure encrypted transfers over HTTPS.
- Complies with industry standard security policies.
- Any file, any size².
- Uses multiple streams to transfer files up to 10 times faster³ than traditional transfer methods (for example FTP/SFTP). Additionally, files can also be compressed in transit.
- Resume downloads from last position in the event of temporary network disconnections.
- Allows files to be transferred in parallel.
- Compartmentalizes the storage of files (only the owner can access their files).
- Allows users to create shares, with specific permissions, to share files with other members of their team.
- Create temporary transfer permits to exchange content.

¹ A command line tool is also available to script transfers.

² Subject to agreed storage quotas.

³ The speed of transfer is always dependent on local network performance (end to end).

BES B2B Visibility

Proactive process management for error-free B2B

Process Rules Synchronization

Business Errors	
	Shipping window missed
	Acknowledgement for PO (Error)
	Order shipped after the all
	Duplicate documents

Ensure compliance with partners' changing requirements. Online rules repository synched with specs and implementation guides updates

For partner changes and upgrades, test online prior to going live.

Process Monitoring

		Line Item: 000973472 (IN
		Order shipped after the all
		Acknowledgement for PO
		Shipping Notice rejected b
		Shipment is scheduled for
		[Order] [525048270
		[Shipping] [0080106

Identify “pending errors” causing discrepancies before they cost you real \$.

Automatically identify errors within and across transactions. Drill-down to root-cause to fix errors.

Exceptions Workflow

Financial impact	
\$2,325.00	(38.46 %)
\$2,070.00	(34.24 %)
\$1,650.00	(27.30 %)

Automate the research and dispute process with automated workflow, and tie transactions to audit trails.

Drill down to review historical errors, order issues, and EDI errors across partners

Pinpoint root cause system and process problems that cost you the most money.

Performance Scorecarding

Track reverse scorecards and performance trends with automated dashboards.

Measure performance by transaction, trading partner or transportation partner.

Trading Partner Community Management (TPCM)

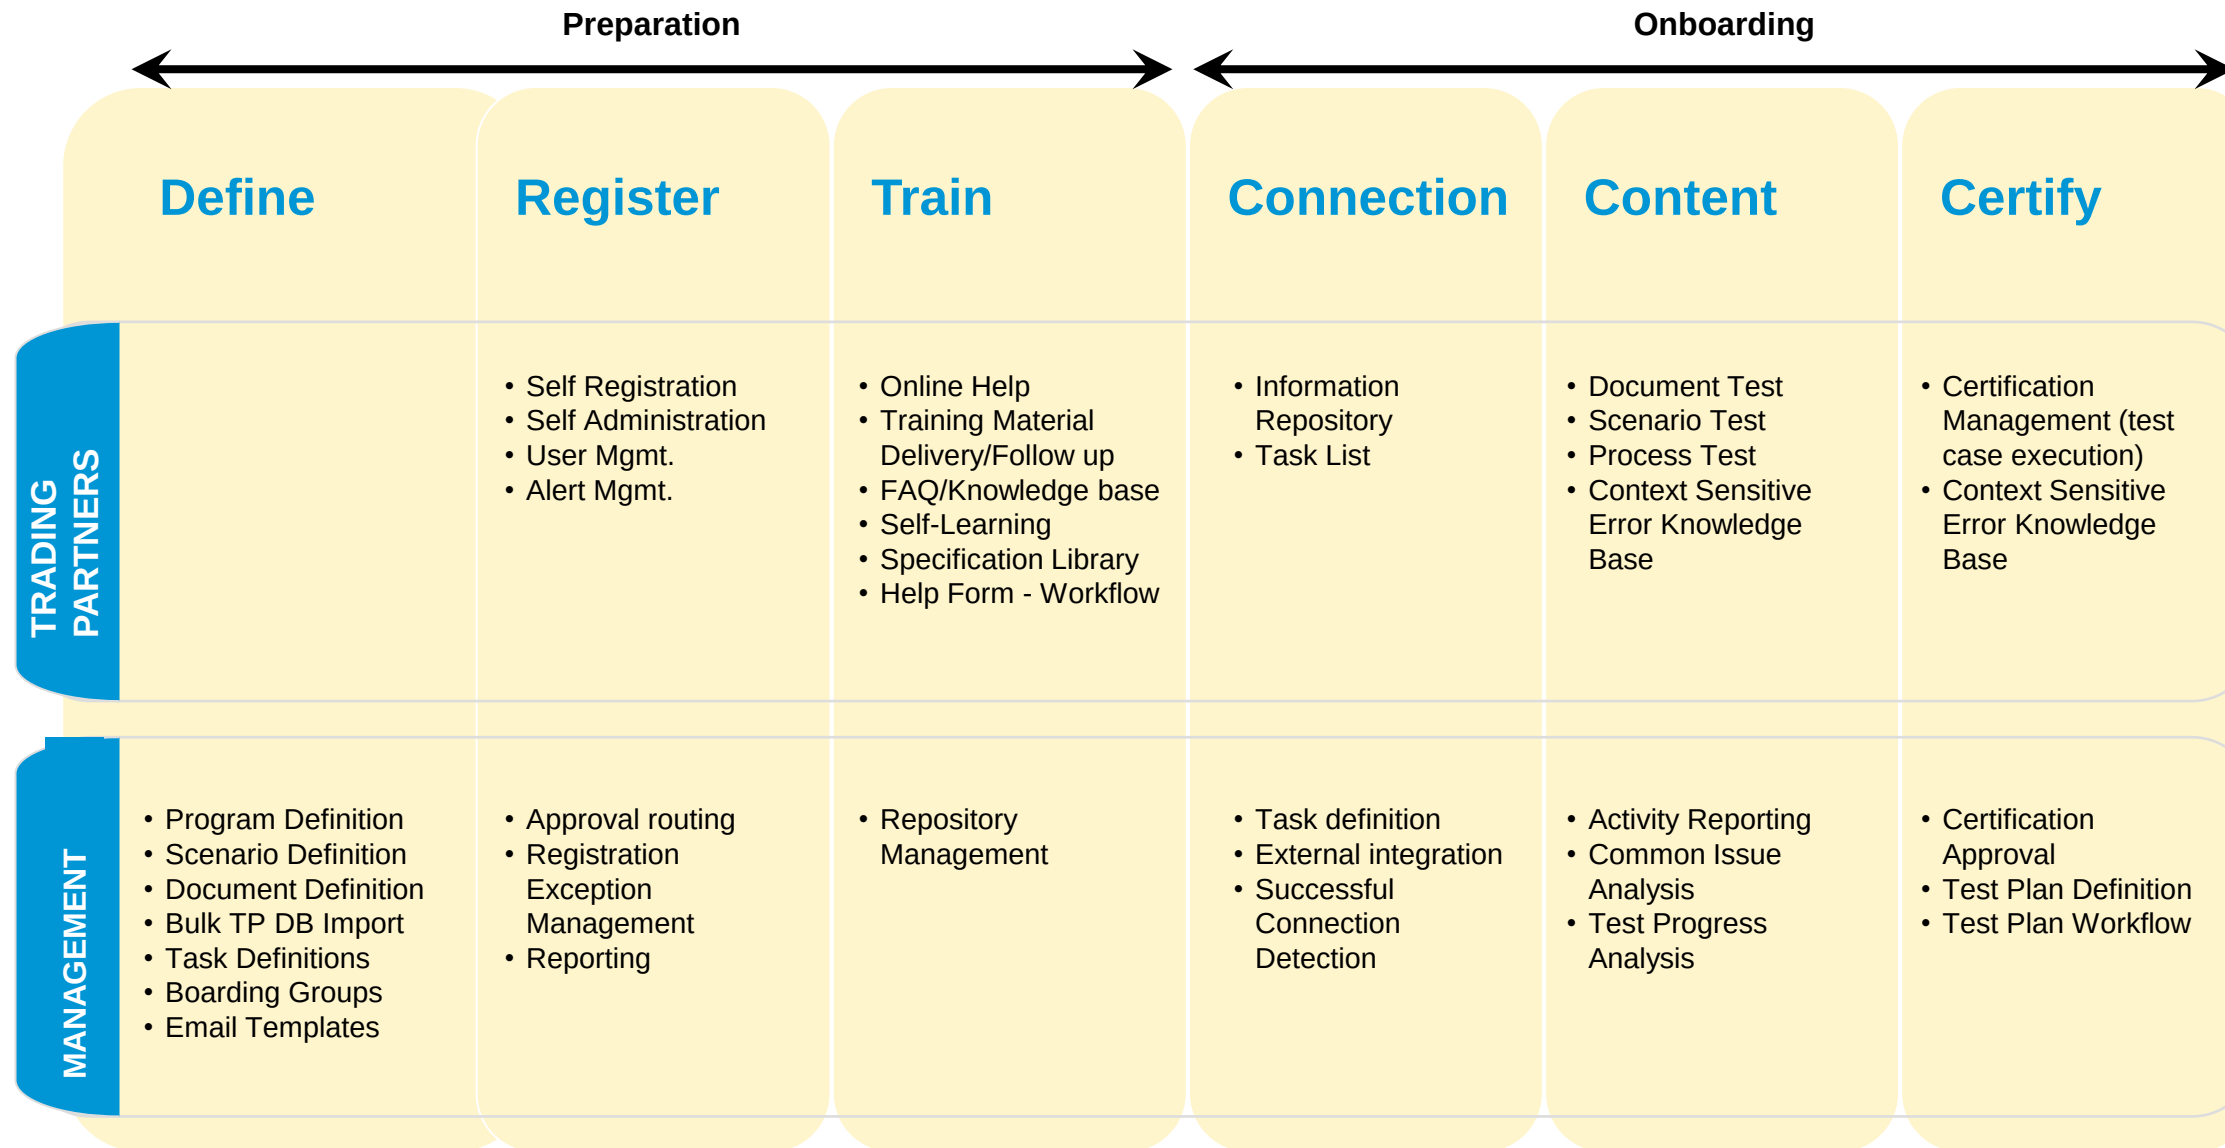

- **What is Trading Partner Community Management?**

- BES' Trading Partner Community Management is a comprehensive trading partner management solution
- It combines BES' 25+ years of Business to Business (B2B) on-boarding experience with the very latest technology:
- A self-serve, portal-based, partner management solution enables large organizations to quickly on-board hundreds and even thousands of trading partners in a fraction of the time, and at a fraction of the cost.

- **BES' TPCM Solution**

- Self-serve On-boarding - helps rollout and certify vendors to compliance changes.
- Surveys, email notifications and task-lists help gauge vendor readiness to program updates prior to rollout.
- Vendors can self-test for compliance certification against specific business rules and compliance guides, not just EDI document syntax.
- And since this is an on-demand service, the trading partner database can become the single source for maintaining partner contacts.

BES TPCM – Best Practice Approach

Customer Case Study: Major Office Supplies CPG

BUSINESS PROBLEM

1. **Aging EDI environment** - required investment in platform and software. Outages were happening frequently and causing business impact (missed transactions).
2. **Costly Support** - system required resources skilled in EDI, communications, mapping, testing and troubleshooting.
3. **Growth** - Trading Partners were requesting EDI compliance and EDI was expected to grow 200% within the next two years.
4. **Expanding Capabilities** – Trading Partners were requiring new technologies such as XML translation, flat-to-flat translation and non-VAN communications which required custom connectivity protocols and interaction models.

SOLUTION VALUE

Cost Reduction – The company selected Business Exchange Services (BES). After migrating to the B2B Outsourcing solution, the client's overall costs dropped by 44%.

Smooth migration – Leveraging BES' proven methodology, project management and B2B skilled resources, the company experienced a smooth transition to the new environment without any business impact. The client was able to meet new requests from Trading Partners because they had access to the large pool of BES skilled resources.

Consistency and flexibility – The company gained consistency in service levels and security, as well as improved capabilities and flexibility to support changing business needs.

Thank you.
