- Supports healthcare EDI standards
- Supports batch and real-time capabilities
- Provides a single interface

# BES Clearinghouse Overview

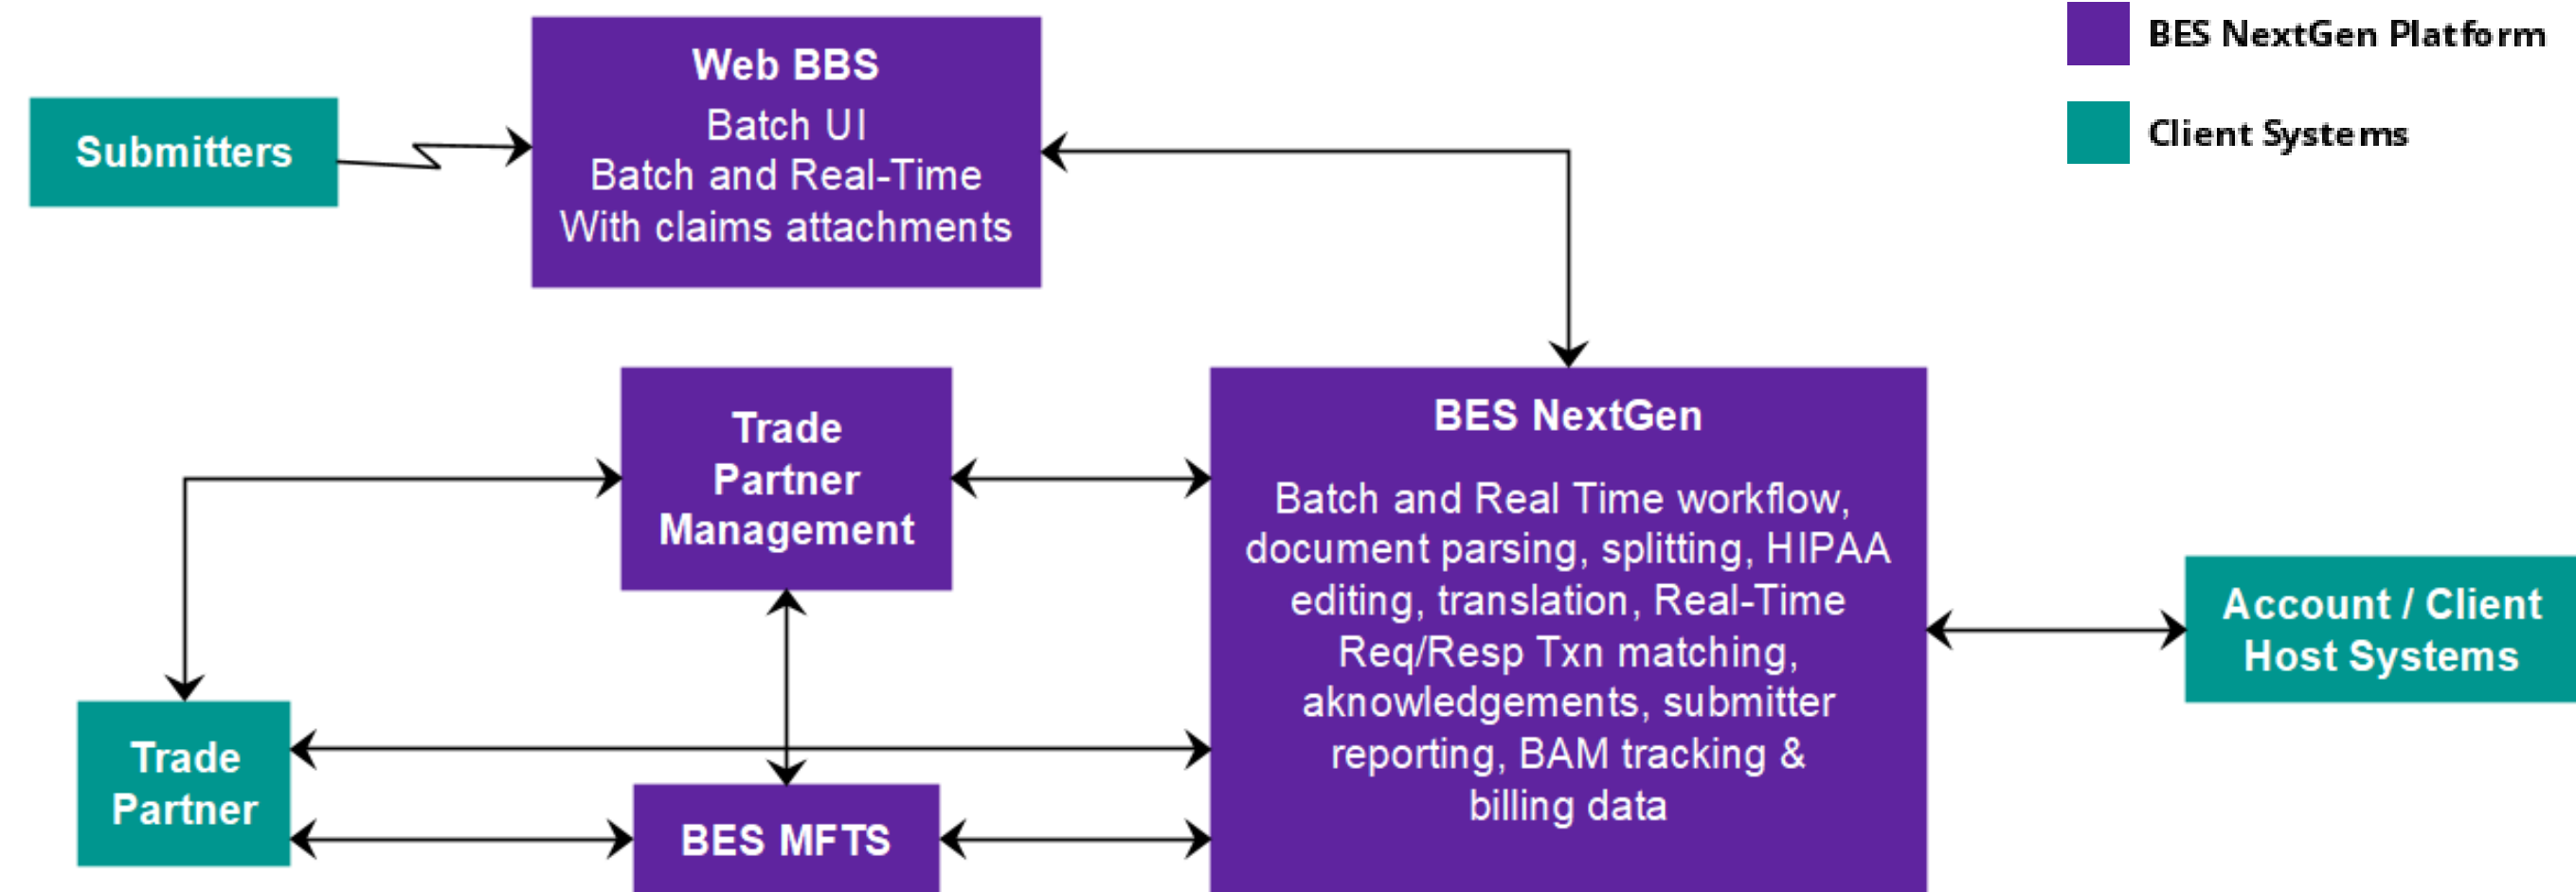

BES Clearinghouse provides a highly scalable service that enables the formatting, editing and exchange of healthcare administrative and clinical documents / transactions.

# BES Clearinghouse Features

- Leveraged service for Commercial and State Healthcare
- Gateway - Single interface to providers
- Real-time and batch routing with complete route history tracking
- Acknowledgment and transaction routing history
- Any-to-any data translation
- Standard and custom transaction audit tracking reports
- HIPAA compliant and certified
- Functional acknowledgement and control messages
- Uniform submission response reports
- Ability to set custom or HIPAA edits to a warning status
- Multitude of delivery timing options
- Clearinghouse and Internet connectivity
  - *Medicare COBC*
  - *Surescripts*
- Operational monitoring including 24x7x365 on-call application support
- Disaster recovery plan and warm site for both hardware and network

# BES Healthcare NextGen Architecture Overview

# BES Clearinghouse Client Benefits

- Increases accountability through standard and custom transaction audit tracking reports
- Comply with industry standards and requirements
- Ensures rapid system throughput
- Increases timeliness of data delivery
- Reduces complexity
- Provides flexibility and scalability
- Reduces or eliminates the need for specialized in-house staff
- Reduces capital investment
- Predictable service levels

# What we do: HIPAA Validation

- Certified for data validation and translation services for all HIPAA transactions
- Claim and document level rejections
- Uniform submission reports
- Ability to set edits to a warning status

# BES HIPAA Validation Features

- Privacy and Security compliant
- Perform Types 1 – 7 editing for all named ASC X12 transactions
- Perform Type 1 editing for NCPDP named transactions
- Claim-level and document-level rejection
- Uniform submission response reports
- Ability to set edits to a warning status
- Monthly code set updates

# BES HIPAA Validation Client Benefits

- Ensures industry compliance
- Reduces complexity and capital investment
- Increases data accuracy
- Provides flexibility and scalability to seasonality and growth
- Increases timeliness of data delivery
- Provides predictable service levels

# BES Ongoing Covered Services

## Operational Support

*Client Management*  
*Escalation Points with Clearinghouses*  
*Job Scheduling*  
*SMC Agreements*  
*Escalation Procedures for Issue Resolution*  
*Escalation Communication Procedures for client's support staff (technical and account)*  
*Release Schedule*  
*Impact Reporting*  
*24 x 7 x 365 On-Call support*  
*Internal Monitoring Tools*  
*Uptime (meet SLA requirements)*  
*Testing of base changes by QA team is independent from development*

## Service Desk

*Level 2 and Level 3*  
*Support Hours – leveraged currently 7 – 6 CT Mon – Fri*  
*Escalation Procedures for Issue Resolution*  
*Reporting*  
*System monitoring/checkout*

## BBS Password Security and Reset

*Initial Client Set-up*  
*Provide Expiring Passwords*  
*Reset Level 1 service Desk Support Personnel IDs*

## BBS

*Deliver – Formatted (such as reports)*  
*Deliver – File*

# BES Ongoing Covered Services

## Bulletin (Message) Posting

*Account Maintained*

*Business Exchange Services Maintained*

## Network Engineering and Provisioning

*Volume (Bandwidth, CPU)*

*Protocols*

*Redundancy*

## Secure Network

## High Availability SOA Platforms

*EDI Processing System*

*BBS Core (cluster)*

*Web Interface (server farm)*

*Database System (cluster)*

## Trading Partner/Contract Management

*Admin Screens*

*Trading Partner Loads*

## Auto Data Stream Recognition

## Disaster Avoidance

*Platforms with existing DR recovery capabilities (AH -> Plano)*

*Internet Network (circuits, firewalls, routers, load balancers, and proxy servers)*

*EDI Processing system*

*BBS Core*

*Web Interfaces*

*Database System*

## HIPAA Mandates

*Updates to base product to incorporate modifications are made in a timely manner after publication of final rule*

*Monthly code set updates*

# BES Ongoing Covered Services

## Reporting

*Transaction*

*Submitter*

## Support X12 Acknowledgments

*999*

*TA1*

## File Archive Services/Transaction History

*NextGen off-site / online retention*

*Off-site Storage*

*Retrieval Timeframe & Frequency*

- *24 – 48 hours to retrieve archived files*
- *Files greater than 45 days old require special approval*

## File Tracking

## Retransmission of Files

## Account Level Billing

## Turnaround Time

*Based on file size*

## Flexible Delivery

*Many-to-1*

*1-to-Many*

*FTP*

*Secure FTP*

*Scheduled*

*Pickup*

*Store and Forward*

*VPN*

*WEB*

# BES Ongoing Covered Services

## Testing Environments

*Model Office (account / client use)*

*Development (BES use)*

*QA (BES use)*

## Duplicate File Check

*Based on account*

## BBS Software Downloads

*Zipped/Non-Zipped*

*Frequency*

*Size*

## Business Continuity Planning

## HIPAA Privacy/Security compliance

## VAN/Other Clearinghouses Mgmt

*Connectivity*

*Monitoring*

*Support*

*Billing and collections*

## WEB Services

*Submission*

*Content Posting*

*Delivery*

*Redundancy*

*Response Time*

*Encryption*

*Uptime*

*Security*

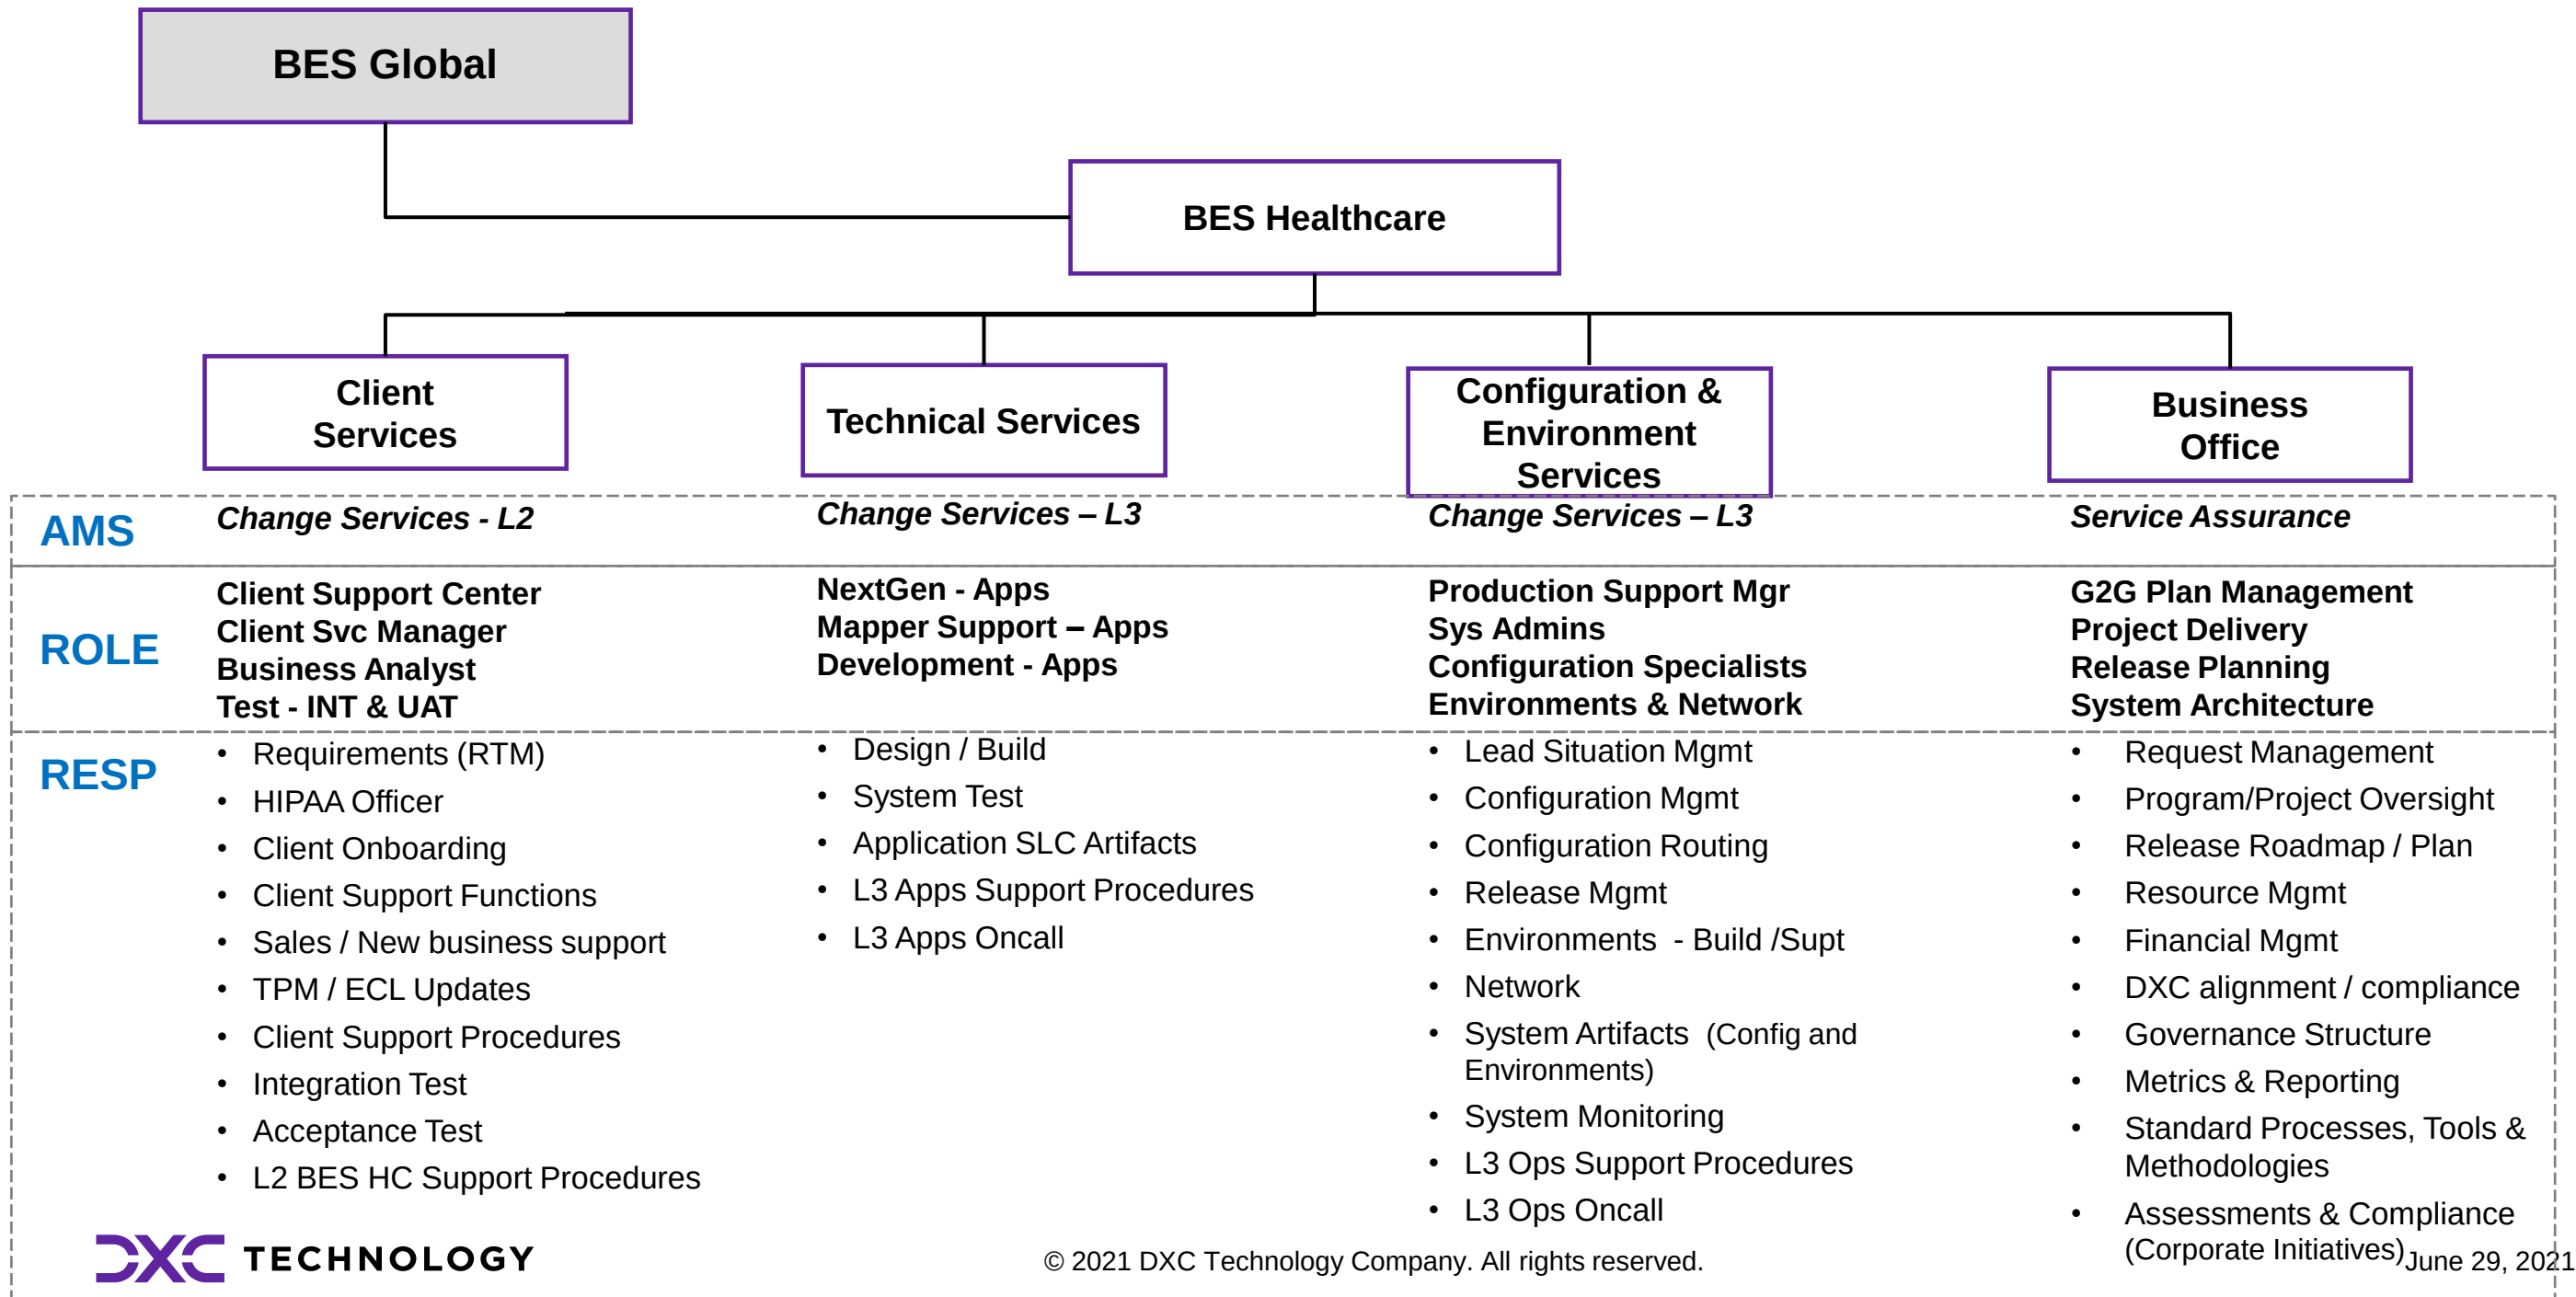

*Firewall (custom router)*

*Authentication*

*Monitoring*

# BES Healthcare Functional Model

# Business Exchange Services - Healthcare

# BES Healthcare

## BES Healthcare

### Change Services

#### *Client Services (2<sup>nd</sup> Level Support)*

- Provide second level support for incident escalation, application access management and application functional support
- Resolve incidents with technical and application knowledge
- Perform the initial incident data collection and root cause analysis
- Analyze and diagnose problems with technical and application knowledge
- Perform as change owner for production data and application changes
- Release change packages to production
- Define, design, code, unit test modifications to applications

#### *Technical & Environment Services (3<sup>rd</sup> Level Support)*

- Provide L3 support for incident escalation, application functional support and access management
- Resolve incidents with SME level knowledge
- Communicate with clients, suppliers and other stakeholders
- Perform in-depth root cause analysis when escalated
- Diagnose problems using SME level knowledge
- Collect and analyze customer requirements
- Architect complex, multi-interface application designs
- Communicate with clients, suppliers and other stakeholders
- Train L2 on resolving specific incidents
- Coordinate changes with the CAB and other stakeholders
- Provide technical leadership to L2
- Design, implement and maintain working environment for applications
- Ensure required continuity plans are maintained and tested
- Design, implement and maintain the database environment for application systems

### Service Assurance

#### Business Office

- Define and maintain BES HC delivery processes and tools
  - G2G Plan; Design & Implement
  - Project Management
- Process Areas Supported:
- Incident & Problem Mgmt
  - Change Mgmt and Release & Deployment Mgmt
  - Availability & Capacity Mgmt
  - Service Request Mgmt
  - IT Asset & Configuration Mgmt
  - Application Event Automation
