- Automatic acknowledgement, exception alerts, and **audit tracking** built-in
- Easily **integrates with a variety of data sources like SAP**, Oracle, Excel, Flat files and databases securely through firewalls.
- Supports generation of item and carton serial **barcode labels** specific to industry requirements (such as retail, grocery, and automotive)
- Provides **rich administration** facility to monitor community business activity
- **Multi-lingual**, multi-currency

100% WEB BASED

Use any web browser, on any platform, including tablets and mobile devices

EASY TO USE

A few short keystrokes allows you to effortlessly access all portal information

MINIMAL TRAINING

A short training session is all it takes to get acquainted with our systems

SECURE & RELIABLE

128-bit SSL encryption prevents snooping eyes from seeing confidential information

DXC and Meade Willis History

DXC and Meade Willis began their partnership 13 years ago. DXC (then EDS Canada) contacted Meade Willis to have them develop a Web solution for Ontario Hydro.

EDS Corp. later engaged with EDS Canada to determine if they had a web solution to offer GM and if it could be put in place within a strict timeline (under a month). The existing contracted vendor was experiencing difficulty providing the solution after a delay which put the timeline at risk.

EDS Canada engaged with Meade Willis to build the required solution. The project was completed successfully and on time.

These projects solidified the partnership between DXC and Meade Willis that led to a chain of collaborations which continue today.

Meade Willis Overview

Meade Willis was founded in 1995 and became a fully Cloud Based SaaS provider in 1997. Up until then, Meade Willis was providing local EDI software.

Meade Willis has handled the transactional and integrated requirements for over 900 companies for DXC since the partnership began, providing Web*EDI, conversion programs, exports/imports, labeling, validation and error reporting, monitoring, helpdesk, consulting, custom solutions, detailed client and billing information, etc.

Reference clients and some of the Hubs which refer clients to the Commerce Web solution(s) are Hewlett Packard Enterprise, PepsiCo, Toyota Bushuko, Nexteer, Land's End (Sears), Metro Group (A&P, Lowes, Super C, McMahon, Dominion, Metro), Sobeys, GM, Johnson Controls, HMMA (Hyundai), KMMG (KIA), HBC (Zellers, The Bay, Home Outfitters), Canada Border Services, etc.

Meade Willis currently manages over 1,400 usernames/companies within the Automotive, Government (CBSA), Food/Grocery, Retail, Pulp and Paper industries.

Meade Willis currently manages and provides ongoing support for over 1,300 inbound and outbound document conversions as well as integrated/custom programs such as EDI (X12, EDIFACT, Odette); XML; cXML; Papinet; IIF; iDoc; CSV; proprietary; PDF; position based and more.

Meade Willis has processed over 1 billion business transactions to date.

Commerce Web Service Offering

The Commerce Web Service Offering provides...

- EDI translation
- HTML Display and Print of inbound transactions (Purchase Orders, Releases, Schedules)
- HTML Templates for the creation of outbound transactions (ASNs, Invoices, Payment/Remittance Advice)
- Turnaround document conversion (pulls data from inbound document to pre-populate outbound transaction with minimal editing)
- Integration with various internal applications (ERP, SAP, Oracle, Seeburger) using various flat file formats
- Email notification of an inbound document with link back to the portal solution
- Label Printing (Container, Shipment, Packaging)
- Connection with DXC MFT Services to conduct the transfer of EDI documents
- Direct AS2 connections with various partners
- Direct FTP connections with various clients and/or partners

Meade Willis - Technical Overview

The Meade Willis infrastructure consists of...

- UPS backups
- Gas Generator backups
- Triple redundancy of applications and data
- Full off-site failover
- Standby machines and critical hardware
- Multiple redundant ISPs

Meade Willis Environment

Meade Willis hosts multiple portals for DXC and their own clients, which consists of the following...

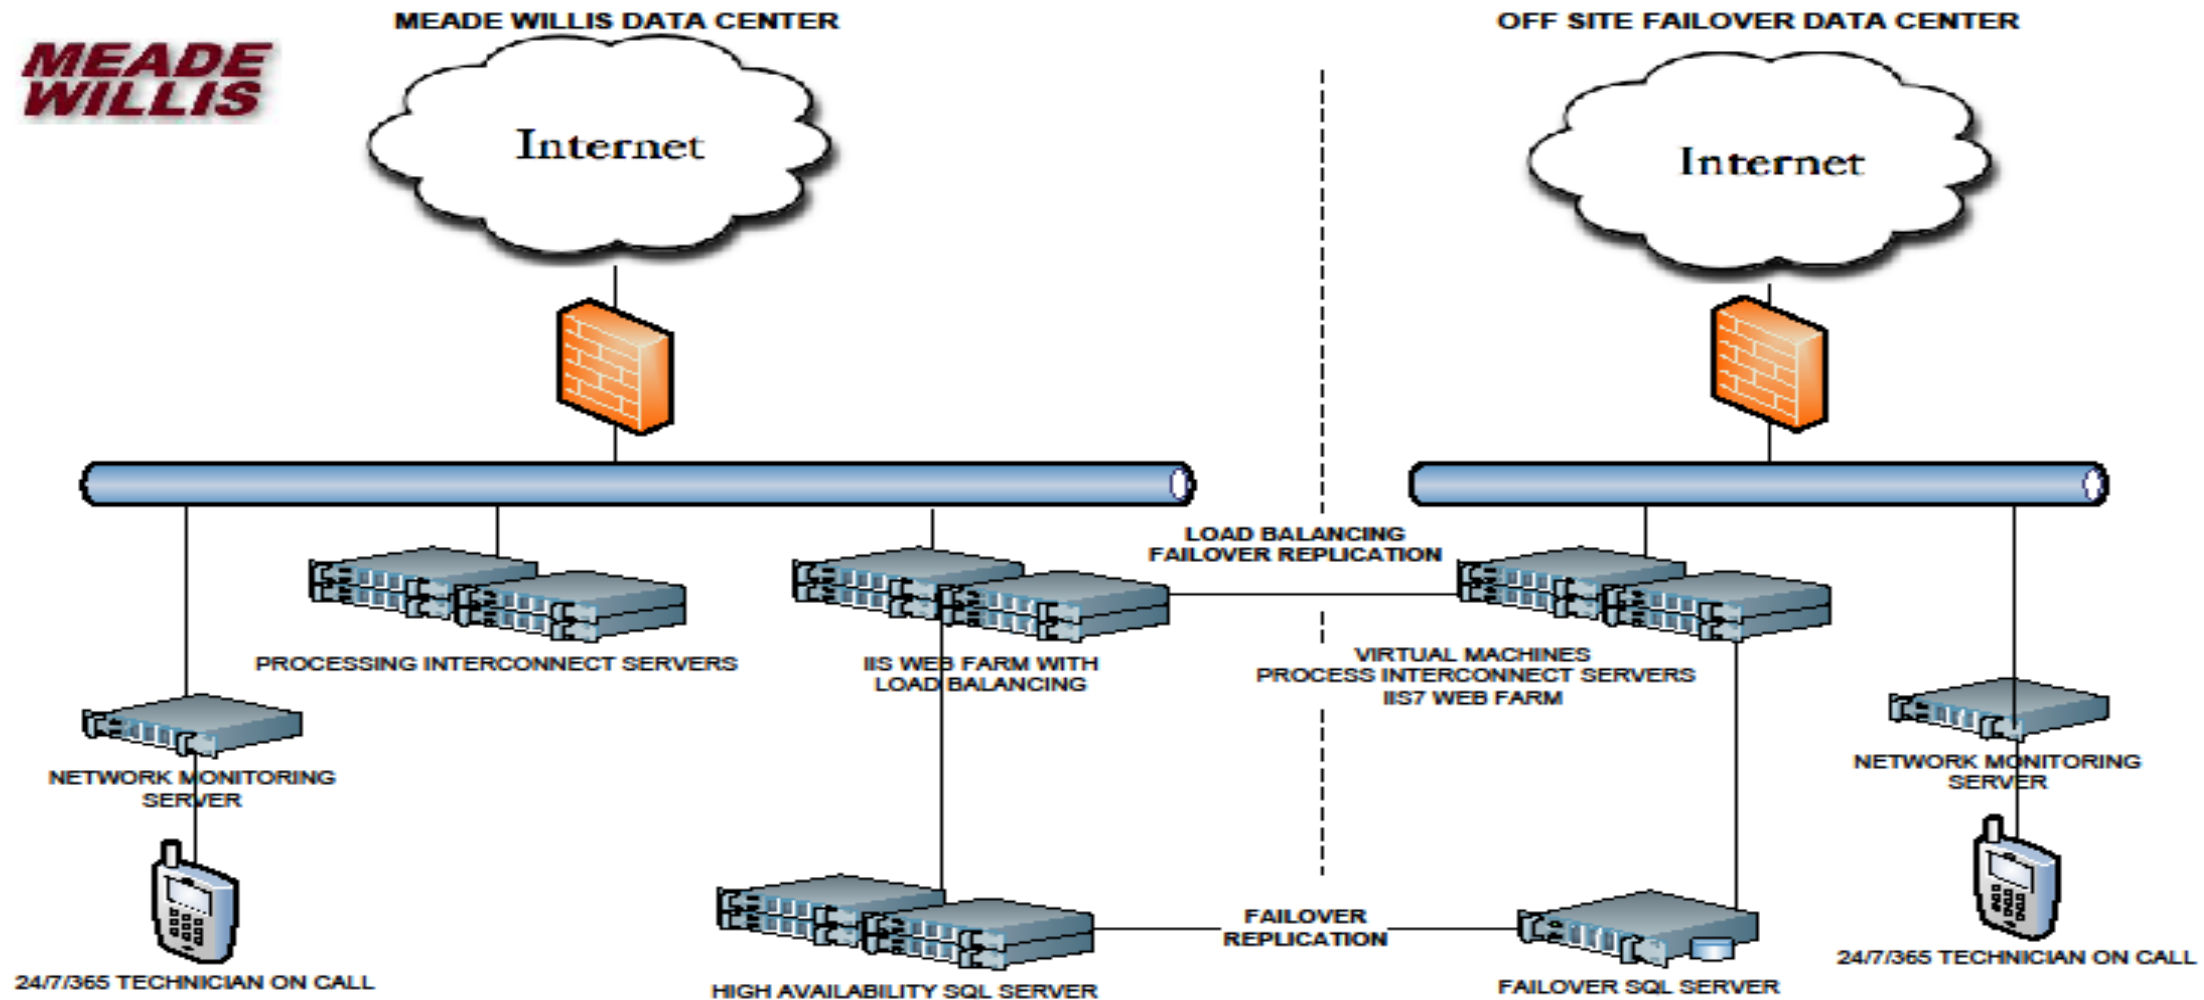

The Commerce Web solution environment has multiple environments for:

- Development
- Testing
- Model Office
- Production

The Commerce Web solution environment supports the following tools:

- Microsoft
- IIS 7.5
- MSSQL 2008 & 2012
- Some additional environments for specific purposes use Java, Linux and C#

**MEADE
WILLIS**

Meade Willis offers the following:

Security

Access management through a magnetic access-card system
Biometrics controlled access
20 live cameras with motion detectors
Monitored alarm system

Connectivity

BGP-Redundant fibre-optic links to the Internet to multiple Tier 1 providers
Dedicated fibre-optic link between our datacenter and failover datacenter
Failover Microwave link to secondary data center

Redundancy

Backups and failover servers stored in secondary data center
Spare servers & parts for emergency situations

IT Logistics

A full-fledged Network Operation Center (NOC)
24/7 monitoring system with Live Operator for Support

Electrical Specifications

Electric Capacity of 3,000 KVA / 600 volts / 3 phases
Two Caterpillar diesel generators of 1,850 KVA, 1.5 MWatts
Two UPS systems of 750 KVA each with service contracts

Environmental Controls

Pre-Action Sprinkler system and Halon fire suppression system
Cooling and humidity controlled by multiple redundant Liebert cooling
Temperature, humidity and liquid detectors
Centralized management of all HVAC

24/7/365 Live Agent – A live person will always be available to take your call.

Meade Willis Development Methodology Overview

All Meade Willis projects follow:

Standard Requirements Gathering, Analysis and Design phases.

As Meade Willis handles many different types of standard and custom SaaS requests - whether it be for a client, partner or trading partner (HUB)...the stages follow different processes depending on the requestor and their needs.

The development and code review processes follow a standard procedure. Programs are developed/modified on development machines, then moved to test environments.

Internal Testing is completed by other resources not involved in the development of the programs. Adjustments are made, if required on the development environment and re-promoted to re-test until all parties are satisfied that the program functions as it is required.

Once the Internal Testing is completed, Meade Willis will engage with the client to conduct User Acceptance Testing. Adjustments are made, if required on the development environment and re-promoted to re-test until all parties are satisfied that the program functions as it is required.

The process then moves to live testing on the test environment and runs as live. The program is then reviewed and approved by a senior Meade Willis programmer.

Upon accepted by all stakeholders, copies of the program are retained and the new or modified program is promoted to a live environment.

If the promotion of the program affects client – notification is provided to them in advance.

Promotion to production occurs outside of peak service hours.

Meade Willis does not have a standard weekly/monthly maintenance window.

Meade Willis Process & Tools Overview

The Meade Willis Client Facing Tools & Templates consist of...

Tools:

- Microsoft
- C#
- visual studio
- IIS 7.5
- MSSQL 2008/2012

Templates:

- Requirements
- Test Plan
- Test Cases
- Implementation Plan
- Signoff Documents
- PM Related (Schedule, Issues, Risks, Status Reporting)
