

INTERNAL ONLY – for Upsell and Cross-sell

Modern Application Development / Intelligent Automation & Integration

Scope/Overview

- Business Exchange Services (BES) offers a comprehensive set of business-to-business (B2B) services that enable clients to integrate and automate trading partner processes with internal applications without the expense and complexity of installing and running a B2B environment themselves.

Value Proposition

- EDI is messy. But for over 25 years, BES has managed this mess for our clients, allowing them to focus on their own mission, while saving thousands of dollars a month in the process. We understand that our clients' trading community eco system is a key asset, one that must work all day every day without disruption.
- BES delivers a hardened B2B integration brokerage service, ensuring secure and reliable exchange of mission critical EDI or XML documents across vast trading networks, while monitoring the flow 24/7 to detect and alert on any discrepancies, be it missing or bad data, standards compliance violations, or late acknowledgments.

Differentiators

- Deep industry partnerships with vendors, Seeburger and Meade Willis, cultivated through our 25 years of rich industry expertise that can be incorporated into our solution as an extra value-add based on the scope of the project - allowing us to provide unmatched value to our clients.
- We are ranked as a Challenger in the latest Gartner Magic Quadrant for Integration Brokerage..
- BES has its own secure global Managed File Transfer network.
- Our AS2 connector is tested and certified annually by the Drummond Group for B2B interoperability and compliance.

Positioning

The case for B2B Managed Service...

What they get (Higher Performance):

- A single global B2B operating environment
- Modern, flexible B2B software
- Leveraged B2B "Center of Excellence" for well-trained, available, best-shore staff
- Built-in redundancy and fail-over
- Transparent technology re-fresh
- Global governance, control and visibility
- Effective trading partner on-boarding and management
- Consistent service levels and security policies

Handling Objections

Q. How can BES help me with trading partners?

A. Business Exchange Services provide full-service trading partner management—automatically applying rules to documents, fully automating the certification process, and certifying compliance at the business rule and data level.

Q. How do your costs compare to your competitors?

A. BES delivers value-based solutions that, when broken down into individual components may not be the lowest cost per component among competitors (nor are they among the highest cost). However, when aggregating a "Total Cost of Ownership" comparison, our solution frequently comes out on top, because it truly is a complete outsourcing service

Why DXC?

- We are not tied to specific software; we always use best-of-breed.
- We have the latest refreshed technology, updated software, and superlative service delivery.
- Our pricing is not complex.
- BES does not charge trading partners.

Conversation Starters

- **Cost reduction**—Reduce cost per business transaction over in-house solutions by consolidating multiple trading formats, reducing VAN charges, reducing or eliminating specialized in-house staff using our leveraged shared resources, and lowering dispute resolution costs.
- **Scalability**—Support growth, change, and technology refresh without disruption, worldwide.

- **Accuracy**—Reduce process and transaction failures and eliminate mistakes in dealing with different system interfaces.
- **Business risk**—Decrease risk through better up-time and consistent and managed security policies.
- **Partner relationships**—Increase partner satisfaction with fewer errors and better information resulting in more sales and process improvements.
- **Compliance**—Increase data and process compliance through automated exceptions handling.

- What improvements could be made if you could **focus on your core business** -- without being burdened with outdated IT infrastructure, fragmented B2B applications, time-consuming error research, and trading partner support and onboarding?
