

Simplify your e-invoicing process

DXC B2B e-Invoicing Service

Streamline your invoice processing while lowering costs, reducing errors and disputes, and securing quicker cash flow with DXC Technology.

Insights

- Exchanging invoices electronically saves time and money.
- Moving to electronic invoices adds complexity to back-office functions.
- Streamlining your processes is easy with DXC Technology.

Exchanging invoices electronically—e-invoicing—can save time and money, but it can also add complexity to your back-office functions. And if you're dealing with multiple systems across various business partners, all of which use a variety of nonintegrated electronic data interchange (EDI) platforms and networks, it can result in costly, slow, and risky exchanges. Then there's the risk of noncompliant transfers. Changing legislation and industry standards in some countries and regions means e-invoicing is about more than digital signatures. Data encryption, long-term archiving, and registration of invoices with local authorities may also be required.

Move beyond basic document exchange

Streamline and simplify your e-invoicing process with DXC Technology. As part of our DXC Technology Business Exchange Services (BES), DXC B2B e-Invoicing Service lets you easily exchange invoices with suppliers and customers electronically through EDI and business-to-business (B2B) technologies. This fully integrated solution lowers costs by reducing errors and disputes and leads to quicker cash flow—all through a single technology and service partner.

It also ensures compliance with legislation in more than 45 countries globally. DXC Technology BES uses the highest available levels of e-invoice legal recognition, including cloud based international compliance enablement. This means you benefit from legally

secure evidence without having to worry about varying national requirements or managing e-invoicing technologies and practices.

These added compliance elements significantly reduce your legal, development, operations, and audit costs, and immediately expand your geographic compliance reach. And because the service is based on extensive and ongoing research by legal advisors, tax administrations, and other experts in each country, you can be assured that you're meeting the most current guidelines everywhere you do business.

Optimize back-office processes

So how does it work? On the supplier side, DXC B2B e-Invoicing Service integrates your supplier invoicing with your back-office systems. This enables you to receive invoices from your partners electronically, in any format, including EDI, PDF, web forms, XML, SAP® IDOC, CSV, email, fax, Microsoft® Excel, and formatted flat file. When electronic receipt is not possible, paper invoices are scanned and interpreted through optical character recognition (OCR) to validate key fields. Alternatively, your suppliers can change a purchase order presented on the web into an e-invoice. The service validates invoices—including signatures, line items against purchase orders, and other criteria you specify—and incorporates the information appropriately with your back-office systems.

* Electronic invoicing (e-invoicing) is the sending, receiving, and storing of invoices in an electronic format—without using paper invoices for tax compliance or evidence purposes.

This service also works in reverse to send out your invoices efficiently and in a format that works best for each of your customers.

The DXC B2B e-Invoicing Service receives invoices from your back-office systems, transforms them into your customers' format, and delivers or receives them through multiple methods. For customers that are capable of e-invoicing, this means transformation into an EDI format and delivery via B2B communication protocols. For customers without this high level of integration, we can convert your invoices into a PDF file and email them, present them on the web, or fax or mail them.

Enhance your e-invoicing capabilities

The DXC B2B e-Invoicing Service leverages our industry knowledge and EDI experience to provide you with an optimal solution, delivered by DXC Technology Business Exchange Services. It consists of all the features you need to leverage value from your investment and increase your business productivity and performance, including:

- Any-to-any format translation
- 50+ supported communications protocols, including all major value-added networks
- Digital signatures issued and validated
- Tax authority punch out
- Certificates and ID lists management
- Legally compliant long-term archiving including retrieval and audit
- Country-specific time stamping.

Supplier side

- Web forms with the ability to auto-create invoices from purchase orders
- Supplier exception alerts automation

- Scan/OCR with key fields validation

Customer side

- EDI, XML, and PDF output
- Fax and email delivery
- Web forms with electronic bill presentment

Get the business benefits you need

The DXC B2B e-Invoicing Service is an efficient approach that delivers tangible benefits to your organization. With it, you can lower your total cost of ownership and receive best-in-class e-invoicing management from a single, accountable provider. You also get:
