

Get B2B/EDI visibility

DXC Technology B2B Visibility Services

Integrated B2B infrastructures require continuous data streams. This improves transaction quality and compliance, reduces data errors/penalties, enables proactive decisions, and identifies trends.

Insights

- Your supply chain provides crucial information.
- A transparent view of transactions and interactions is essential for success.
- DXC Technology B2B Visibility Services can make this a reality.

Business interactions are the key to your success. But are they working as they should? By analyzing data from your past business interactions, you can make smarter business decisions in the future, and run your business with even greater precision. All you need is a view into that data.

Gain visibility

Make visibility a reality with DXC Technology B2B Visibility Services. Its portal-based solution lets you easily view and correlate business-to-business/electronic data interchange (B2B/EDI) transactions through a simplified dashboard, letting you quickly analyze transactions in real time. And based on your specifications, the graphical interface displays the status of business processes such as order-to-cash or procure-to-pay.

Further complementing your back-office solutions, this collection of web-based tools supports your relationships with your supply chain network. With it, you get process visibility and management of a wider supply chain collaborative network, external to your business enterprise.

Get value-added business tools

This service also provides powerful analytical and monitoring tools for accurate root-cause analysis, performance tracking, and business operations monitoring—all in a nonintrusive way, using your current B2B/EDI infrastructure.

You only need a browser running on a web-accessible device to link individual B2B transactions and view them in an integrated fashion in the context of a business process. DXC Technology B2B Visibility Services—a part of DXC Technology Business Exchange Services (BES)—is simple to use, and the tools are highly customizable. For example, you can apply numerous process rules like alerts for missing invoices or deviations in shipped goods. When the sophisticated engine identifies rule deviations or other potential business errors, the system notifies appropriate users and records the information for further analysis and review. You can also run standard and custom reports to address specific business needs and customer requirements. Added business advantages include:

- Is offered as a service, with the monthly fee based on the number of processes and user logins, for low upfront costs and quick return on investment

- Is not dependent on specific B2B software or networks, and can be quickly implemented without disrupting existing systems and processes by installing local software or developing local integration
- Provides near-infinite scalability via its Software-as-a-Service platform
- Is compliant with the latest B2B/EDI standards

Get a single, accessible view

Gain a single point for managing and monitoring inter-company processes and transactions with DXC Technology B2B Visibility Services. This globally available, web-based portal gives your business and technical teams a user-friendly way to track messaging data, traffic, and other transactions. And while very accessible, it's also very secure. All user access is secured with a solid-state logic channel, and user- and role-specific permissions are managed through a user name. Additional features add to the usability of this solution, including:

- Intuitive web-based design requires no EDI experience to view message data, traffic, and status

- Ability to view, print, or export any format of inbound and outbound documents/ messages including human readable format
- Quick access to detailed process status
- Option can filter and aggregate messages by multiple parameters like message type or from/to destinations

- Ability to easily create, view, modify, correct, or delete documents using a simple form with data defaults and validations

- Ability to view raw EDI data and information history with robust archiving capabilities

- Filter and search capability can be used for any transaction or trading partner, and documents can be stored and managed directly in the portal

- Support is available for all EDI standards and versions, such as X12, EDIFACT, XML, and alternate messaging technologies

Get the DXC advantage

This solution is about more than just insight— it's about adding real business value to your supply chain partnerships through an IT tool that contributes to the bottom line. With DXC Technology B2B Visibility Services, you'll benefit from:

- Lower administrative cost for dispute resolution
- Higher customer satisfaction through fewer process failures and having information

- Fewer invalid claims and deductions
- Lower cost of process failures like expedited freight or reworked labor
- Faster order-to-cash cycle time and invoice write-off
- Reduced stock-outs, leading to increased sales
- Reduced inventory carrying costs
- Better scorecard performance

Work with an experienced partner
