

DXC File eXchange Service

Stay safe and ahead of trouble

Ensure simple, secure, and high-speed ad hoc file transfers of large and confidential files.

Insights

- Ensures end-to-end file transfer security of ad hoc transfers
- Enables transfer of large files
- Provides comprehensive file tracking for SOX, HIPAA, and GLBA compliance
- Integrates with commercially available data loss prevention (DLP) solutions via the ICAP protocol
- Available in cloud and private cloud options

More control, less frustration

Today, much critical business information is contained in files, spreadsheets, word-processing documents, slideshow presentations, audio and video files, high-resolution graphics, and folders of multiple files.

These files are flying across your business or supply chain daily, sent by people to other people in an ad hoc fashion. Many of these files are sensitive and could harm your business if the information in them were stolen, misdirected, late, or lost. Also, files are getting larger, straining email and communications systems.

Business people and IT staff are struggling with the mechanics of ad hoc transfers. Current methods are inefficient, insecure, or both. These include file transfer process (FTP) servers, free web-based dropbox services, and CDs/DVDs or flash drives sent via courier or overnight mail.

If you're relying on one of these methods—or a patchwork of several—to manage ad hoc file exchanges, your business is likely at risk.

These methods can result in lost time, higher costs, business delays or disruption, and unacceptable levels of risk. In the event of data transmission problems, you may never know

when, where, or why a problem happened—until it's too late to take action.

Single, secure solution

DXC File eXchange Service (FXS) is a secure web portal that empowers business people to transmit large and/or sensitive files. With DXC FXS, business people can independently create, manage, and track secure file transfers of any type and any size, inside and outside the company firewall. Meanwhile, IT staff and email administrators can enjoy centralized control for compliance, audit, and security purposes.

This DXC portal replaces cumbersome, difficult-to-use FTP servers and other insecure, inefficient methods. It solves all the problems with ad hoc file transfers—in a single solution.

With DXC FXS protecting your ad hoc transfers, you can ensure the right file gets to the right person at the right time, every time—and do so efficiently and cost effectively.

Your business users and IT staff will be more productive. You'll have tighter control over security, audit, and compliance—no matter how big your file sizes or volumes. Your business and supply chain operations will be more secure and streamlined.

Secure, fast, guaranteed delivery

DXC FXS provides secure, fast, and guaranteed delivery of any kind or any file size. And business people don't have to be security experts to use it.

Web users can compile, create, transmit, secure, manage, and track their data transfers from this secure DXC portal, via any device that has a browser.

Smartphone app for secure file exchange

With DXC FXS mobile app, you can:

- Ad hoc share large files or folders with known or unknown people
- Edit files on your mobile device, using system editors for real-time collaboration
- Upload or download large files from your mobile device to the DXC FXS server
- Manage your DXC FXS server data
- Grant permits to people to upload or download their large file to the DXC FXS server

Lower cost of ownership

DXC FXS lowers the total cost of ownership of managed file transfer and administrative overhead for IT staff.

It saves time, money, and manpower for your IT staff by:

- Eliminating the cost and hassle of managing multiple FTP servers ("FTP spaghetti")
- Offloading your email servers, eliminating email latency, and reducing storage and archiving requirements

- Eliminating FTP security and support problems, including:

- Need to provision/de-provision secure FTP sites for ad hoc transfers
- Involvement in investigating simple file transmission problems

- Providing a central management console that is much easier to use than consoles for FTP servers or other managed file transfer solutions
- Strengthening compliance by providing comprehensive file tracking for SOX, HIPAA, and GLBA compliance

With DXC FXS, your IT staff have centralized control over every file that business people send through the portal.

IT staff can:

- Track files
- Create customizable notifications and alerts for administrators and users
- Specify lightweight directory access protocol/ Microsoft Active Directory integration
- Create and manage local users
- Improve file lifecycle management
- Automate the data transfers, using the command line tool for your reoccurring business processes

DXC FXS offers high performance and scalability. It scales your business and supply-chain operations. You can extend your DXC FXS cloud to use your network-attached storage and take advantage of its high-availability, compression, and encryption features. It delivers high system availability, with automated backup and restore and continuous

database replication for fast service restoration.

Smoother, safer business with DXC FXS

By giving you broader, more automated insight into ad hoc file transfers, DXC FXS can help you improve productivity, strengthen and simplify compliance, improve business flexibility and speed, and reduce operating costs.

DXC FXS benefits**For business users:**

- Works the way you work – sends files right from your desktop
- Up to 10x speed performance over traditional transfer methods – with actual speed dependent on end-to-end network bandwidth

For IT administrators:

- Replaces multiple, hard-to-manage FTP servers
- Simplifies administration
- Provides policy-based enforcement

For chief security officers:

- Prevents data breaches, with data-leak protection
- Delivers files securely with end-to-end encryption
