

SEEBURGER products

Your go-to team for SEEBURGER products

DXC knows SEEBURGER products. We use them for ourselves and with our customers. The DXC team works directly with SEEBURGER's development staff to influence current and future products. With our expertise, we can help migrate your mission-critical applications to SEEBURGER. And, much of our experience comes from running our own B2B gateway with SEEBURGER Business Integration Suite (BIS)

Insights

- Guaranteed delivery
- Connectivity options
- Never down, never slow
- Standards-based messaging
- Any-to-any data transformation
- External and internal integration
- Automation of monitoring, operation, self-recovery
- End-to-end traceability
- Easy transfer of large files
- Comprehensive tracking for compliance requirements
- Products integrate with off-the-shelf DLP solutions using ICAP
- Available in cloud and private cloud delivery

Design

Our Business Exchange Services (BES) SEEBURGER Center of Excellence (COE) team has the expertise to turn your requirements into a functioning design.

Performance Driven

Concerned about volumes? Performance? DXC runs the largest single instance of SEEBURGER in the world. Through our own operational experience, we understand scaling to handle large volumes with high throughput on SEEBURGER like no one else. We know where the process bottlenecks are and can design solutions to meet your requirements.

Never down, never slow

High-availability solutions? Site-to-site failover? Active-active clusters on DXC market-leading servers? Yes, we've done it, and we can help you do it, too.

Operational experience

Leverage our experience to operate a mission-critical B2B gateway using SEEBURGER

BIS. We know what to monitor and how to automate it with ticketing. And, we can build in error resiliency, minimizing operational costs. Leverage our customizable dashboards, making key information available at a glance.

Efficient onboarding

The SEEBURGER portfolio offers multiple products to help you onboard partners. We help you identify the right set of tools and assist you with implementation and onboarding processes.

Your business case may require specific adapters for direct connections, or to reach large numbers of users through a controlled campaign management tool. Need to enable small partners to be Electronic Data Interchange (EDI) capable? For any case, we know the tools and how to use them.

Mapping

The DXC BES SEEBURGER COE team has extensive experience with the SEEBURGER mapping tools. The team sets mapping standards for

implementations in DXC. We've implemented thousands of maps and map variants. We're experienced in standards-based messaging:

- ANSI X.12
- EDIFACT
- EIAJ/HWSW
- TRADACOMS
- RosettaNet
- XML flavors

We also do any-to-any mappings for internal formats and Mapping-as-a-Service data transformation.

Installations and migrations

If you need to consolidate applications or migrate data centers, we can help. DXC has planned and executed migrations from existing B2B solutions to SEEBURGER-based solutions and migrated between data centers multiple times. Even an upgrade from existing servers to new ones can be challenging, but we have experience to help you be successful.

Business Outcomes

We know that choosing the right B2B integration products and solutions is daunting. Technology helps deliver functionality and allows for resilient, cost-effective implementations, but it can't solve business problems alone. That's where we make a difference.

Profit from our experience migrating multiple stand-alone applications into a comprehensive integration solution. Benefit from one solution over many applications:

- Lowers total cost of ownership
- Improves throughput
- Lowers complexity for users
- Gives better visibility to business documents
- Provides better governance
- Meets Sarbanes-Oxley Act (SOX) requirements
- Complies with HIPAA, Gramm-Leach-Bliley Act (GLBA)
- Audits with ease

DXC differentiators

Automated queue management

With many partners, sooner or later a connection will have a problem. What if your application could detect the condition and self-recover without having to involve a costly support agent? We can handle this efficiently with automation, improving recovery times, and significantly reduce operational costs. Ask us how.

Best practice, move to production

Let's discuss your path to production, ITIL/SOX-compliant move-to-production processes, and how to implement all this with SEEBURGER tools. Benefit from lower error rates, accelerate implementations, and satisfy audit requirements.

REST automation

DXC and SEEBURGER have worked together to automate functions via web interfaces. This provides higher productivity, making it easier

for businesses to use SEEBURGER BIS functions.

Enterprise integration

SEEBURGER products can be operated as best-of-breed, standalone applications or as a suite for B2B, internal integration, or both. And, these products integrate with off-the-shelf data loss prevention (DLP) using Internet Content Adaption Protocol (ICAP).

Developing the product

Our BES SEEBURGER COE teams work with SEEBURGER's teams to improve products. We're constantly providing input from our experience, our customer requirements, and new technology developments.

SEEBURGER product portfolio

Tell us your requirements and we can help get you the right capabilities from SEEBURGER's product portfolio. Common requests include:

- SEEBURGER Business Integration Suite
- Connectivity options/adapters
- Mapping, mapping repository
- Large file transfers
- End-point enablement
- Rollouts, onboarding, certificate management
- Move to production automation
- High-availability application design and implementation
- End-to-end visibility

The advantage of an experienced partner

The DXC BES SEEBURGER COE team is part of a much larger organization, which delivers proven B2B ecommerce connectivity, integration, and process management solutions. BES can help you manage the flow of information, data translations, and collaborative processes with your entire global trading partner community. Our operations center monitors your systems 24x7, to ensure consistent and reliable service.

- DXC has more than 25 years of EDI and trading community integration experience.
- We have 1750+ global clients, connect to 130,000+ trading partners, and process 3 billion+ transactions per year.
- Our breadth of services and depth of technology experience are unparalleled, extending to healthcare, consumer industries and retail, transportation, government, financial, automotive, and other manufacturing industries.

DXC Business Exchange Services is a global leader in integration brokerage, providing flexible, scalable B2B solutions and services. We help clients better communicate and connect for the exchange and transformation of data, partner management, regulatory compliance, process visibility, and quality assurance.
