Transition

- Transition Approach
- Implementation Management
- Implementation Milestones
- Transition Roles and Responsibilities

Transition Approach

Five stages of Transition and Transformation:

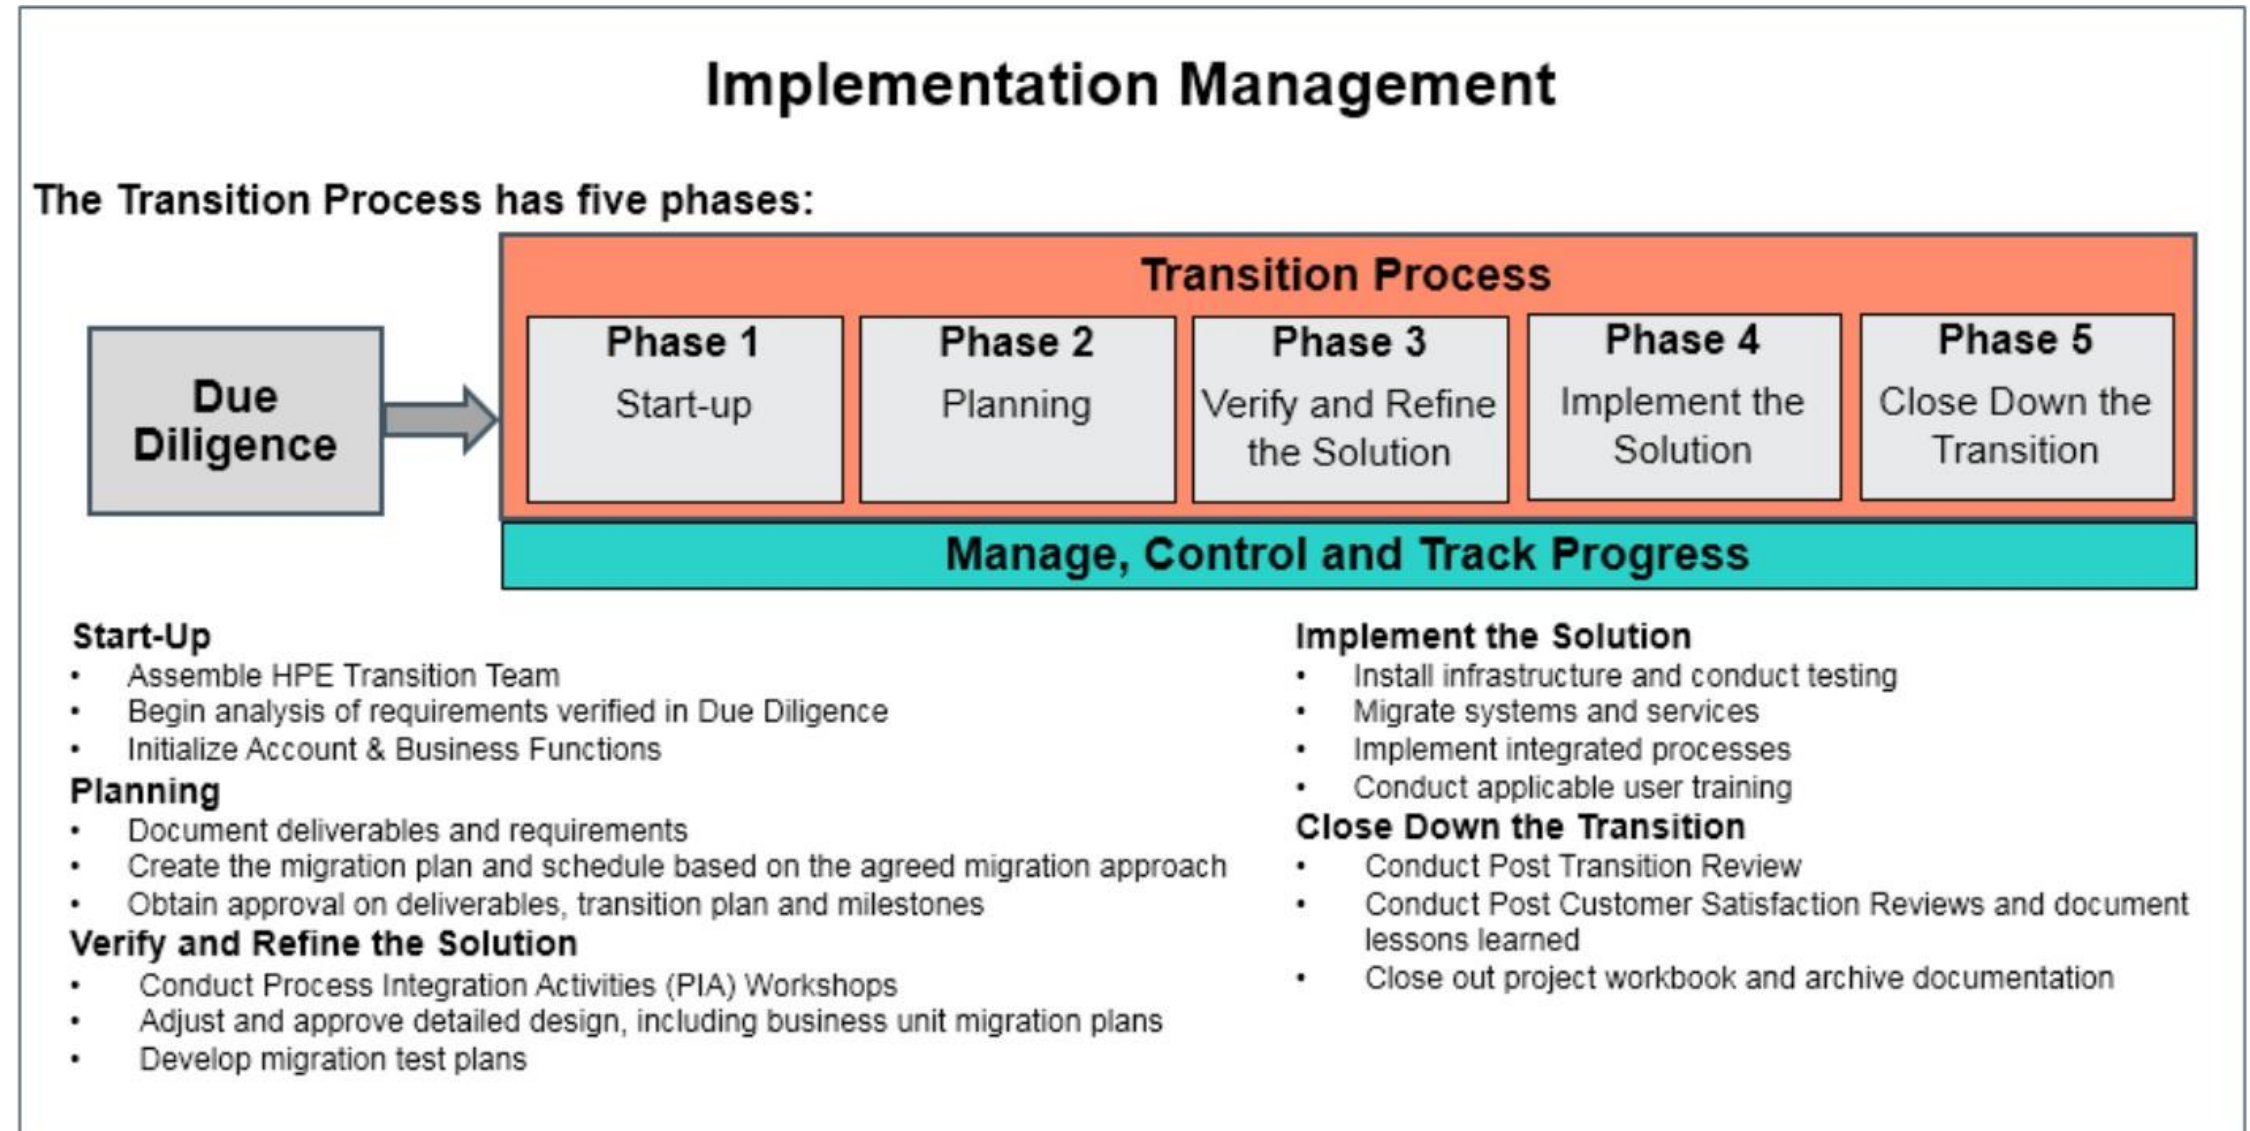

1. Due diligence and start-up activities that establish governance and put the new Client-BES team in place
2. Transition plans and implementation tasks and procedures that outline how the transition will proceed
3. Transformation design (verify and/or adjust) to define the initial steps and common themes for taking client's business to its future state
4. Implement the verified solution – iterate as needed. Steady-state services in the future mode of operation
5. Close down transition

Support structures for the stages are:

- **Knowledge transfer** that begins before contract signing and is managed throughout transition and transformation, including current BES account personnel
- **Management of change**, a systematic way to achieve and accelerate sustainable results from business change
- **Project management** practices to achieve repeatable results that consistently meet expectations

Implementation Management

To provide Clients with the information needed for quality reviews, a low-risk implementation, and on-time delivery, BES uses a transition management methodology called Implementation Management (IM)

Implementation Milestones

- **Project Kick-off**
- **Current Situation analysis/due diligence**
- **Define & Validate Requirements**
- **Leverage/Update Maps & Perform Unit Testing**
- **System/Integration Testing**
- **User Acceptance Testing**
- **Obtain Client Signoff**
- **Production Deployment and Go Live**
- **Hypercare Monitoring & Support**
- **Transition to Production Support**
- **Close Down**

Transition Roles & Responsibilities

Client

- Identify resources/SMEs for project
- Provide current layouts/maps, guidelines and TP information
- Participate in Current Situation Analysis
- Participate in status meetings
- Establish and test connectivity to DXC Service
- Set up routing and monitoring of data files to/from DXC Service
- Participate in User Acceptance Testing & provide Signoff
- Provide approval for production deployment
- Prepare & execute production cutover activities

DXC

- Identify project resources
- Create communication plan & schedule status meetings
- Setup client in all environments – DEV, INT, QA, MO & PROD
- Conduct current situation using client layouts/maps, guidelines and TP information
- Develop/Update maps, test data & test cases and perform Unit testing
- Perform QA and Integration Testing
- Perform and support User Acceptance Testing with client
- Prepare for Operational Readiness
- Prepare production environment for deployment
- Support client production cutover go live
- Conduct monitoring and provide 30-day Hypercare
- Transition client to ongoing production support team
- Project close down

High Level RASIC Chart

Activity #	Activity Description	DXC	Client
1	Develops and Maintains Core System	R, A	S, C, I
2	Develops and Maintains Business Process Layer	R, A	S, C, I
3	Develops and Maintains Maps	R, A	S, C, I
4	Develops and Maintains Tracking and Archiving Services	R, A	S, C, I
5	Develops and Maintains Application Integration Services	R, A	S, C, I
6	Incident Management	R, A	S, C, I
7	Problem Management	R, A	S, C, I
8	Change Management	R, A	S, C, I
9	Capacity Management	R, A	S, C, I
10	Release Management	R, A	S, C, I

Delivery of each obligation and responsibility is categorized as:

R – Responsible, those who do the work to achieve the task;

A – Accountable, the one ultimately answerable for the correct and thorough completion of the deliverable or task;

S – Support, those who support the Responsible party;

I – Informed, those who are kept updated on progress;

C – Consulted, those whose opinions are sought.

EDI Operations – Key Roles and Responsibilities

Activity #	Activity Description	DXC Responsibilities	Client Responsibilities
1	Maintain Core System	-Maintain the system to ensure processing in accordance with SLA -Monitor system health -Notify Client of scheduled maintenance, including any scheduled hardware refresh -Provide Client with Business Continuity and Disaster Recovery Plan documentation, as well as results of paper and live DRP drills -Changes handled through Release Management (see below)	-Plan and schedule processing jobs outside of the normal maintenance window
2	Maintain Business Process Layer	-Maintain components of the service's software application layer, that controls EDI processing -Changes handled through Release Management (see below)	-None
3	Maintain Maps	-Maintains maps as needed -If maps need to change as a result of internal DXC system changes (tracking app requirements, for example), proactively notify Client of the change process	See Change Management
4	Tracking and Archiving Services	-Setup and maintain user access to tracking applications, including revoking access as requested by Client -Maintain file and document tracking applications -Provide support to Client as needed for file and document tracking applications -Provide archiving retrieval as requested by Client	-Ensure only authorized employees gain access to Doc Tracking system -Immediately inform DXC when access should be revoked (for example a terminated employee)
5	Maintain Application Integration Services	-Monitor the transmission of data to/from DXC system -Provide information on applications and interfaces and provide advance notice of any changes that affect processing well ahead of time	-Monitor the transmission of data to/from DXC system -Provide information on applications and interfaces and provide advance notice of any changes that affect processing well ahead of time

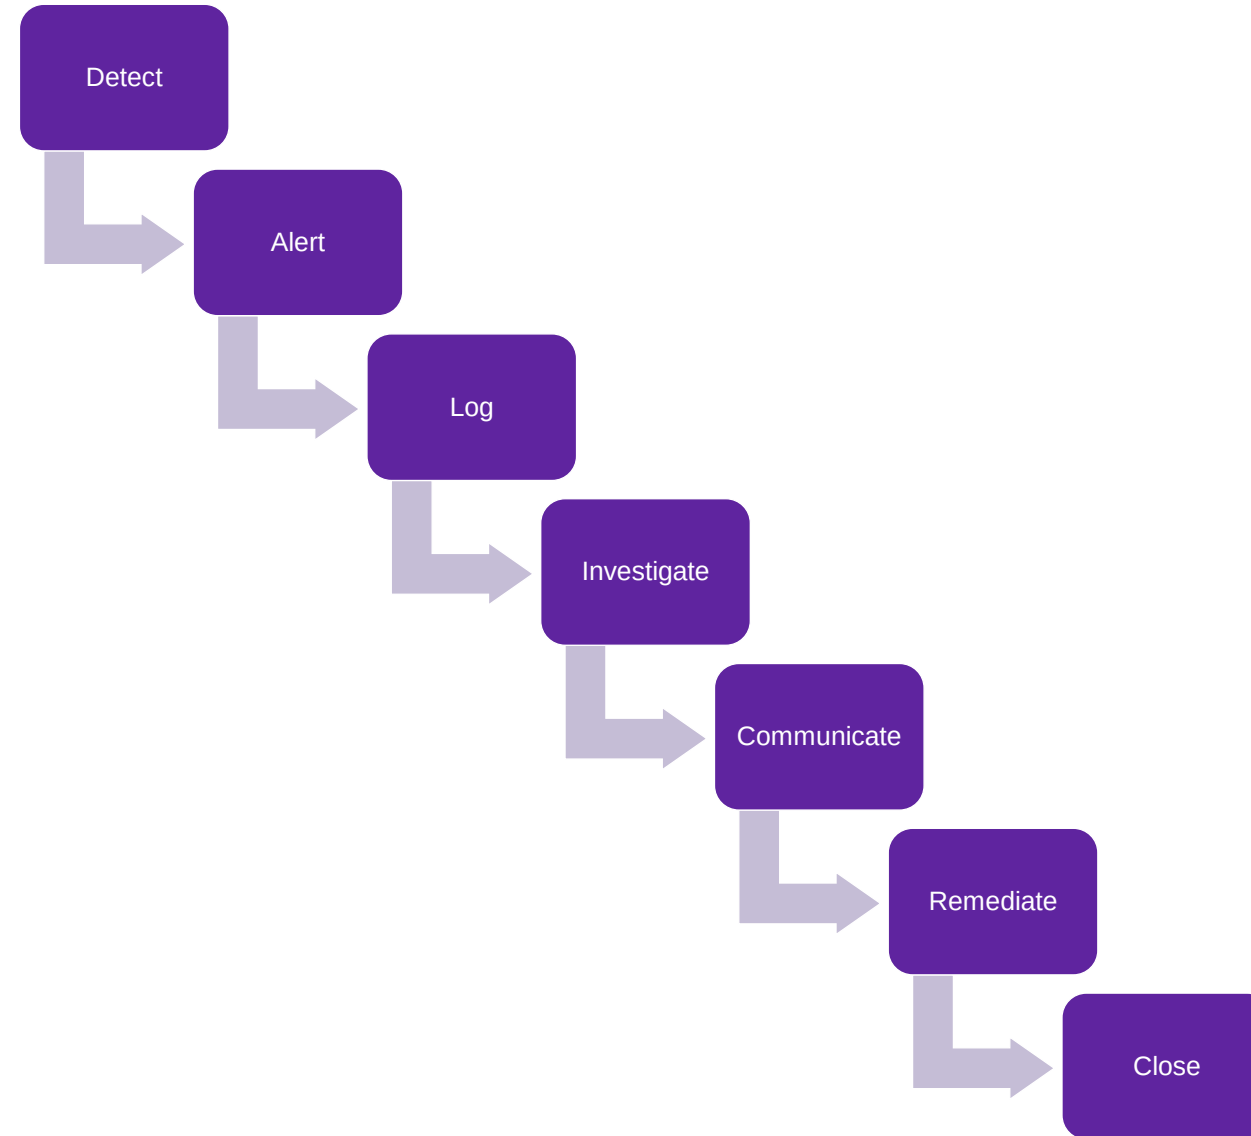

Activity #	Activity Description	DXC Responsibilities	Client Responsibilities
6	Incident Management	-Provide EDI Service Desk in accordance with SLA, incl. current escalation process, contact names/phone/pager/cell number -Coordinate the resolution of any issues that may arise, including: *Fixing any map defects uncovered post implementation *Communicate any required actions on the part of Client or Client TP for resolution *Resolving any other DXC issues preventing processing in accordance with SLA -Timely response with Client representatives to prevent resolution delays	-Provide DXC with current escalation lists, containing contact names/phone/pager/cell number -Provide DXC information about the process of escalating issues -Resolve issues that may arise, including: *Internal processing issues (bad data sent, servers unavailable, etc.) *Escalation of issues to Client's trading partners (TP) as requested (TP bad data sent, servers unavailable, etc.) *Closure (accountability) of issues to Client's trading partners *Re-send data as requested after any defect fixes by DXC or TP -Timely response with DXC Service Desk to prevent resolution delays
7	Problem Management	-In the case of any P1 incidents, manage and coordinate Root Cause Analysis to prevent future occurrence -Communicate RCA when completed	-Participate as necessary in P1 Root Cause Analysis (RCA) activities
8	Change Management	-Manage and coordinate the end-to-end EDI change process including changes within the DXC environment, affecting DXC managed artifacts -Perform change process activities in a timely manner, including: *Log request *Estimate effort and communicate to Client *Perform and unit test the change *Perform QA test and inform Client when ready for acceptance test *Release to production upon Client acceptance	-Manage and coordinate the change process within the Client environment, affecting Client managed artifacts, including any dependencies outside EDI -Submit EDI change request to DXC using agreed process (and forms), including complete and clear requirements -Review and provide timely approval/comments to change effort estimate -In the case of a request requiring changes in Client's environment, perform changes and unit and QA test the changes -Test changes, and provide timely acceptance/comments
9	Capacity Management	-Monitor system utilization -Expand capacity as needed, and inform Client of any upgrades that may impact Client processing (rare)	-Proactively notify DXC of forecasted growth or spikes in volume
10	Release Management	-Manage the release schedule of the EDI service -Perform release upgrades as needed -Communicate with Client regarding any releases that may affect Client processing.	-None

Incidents

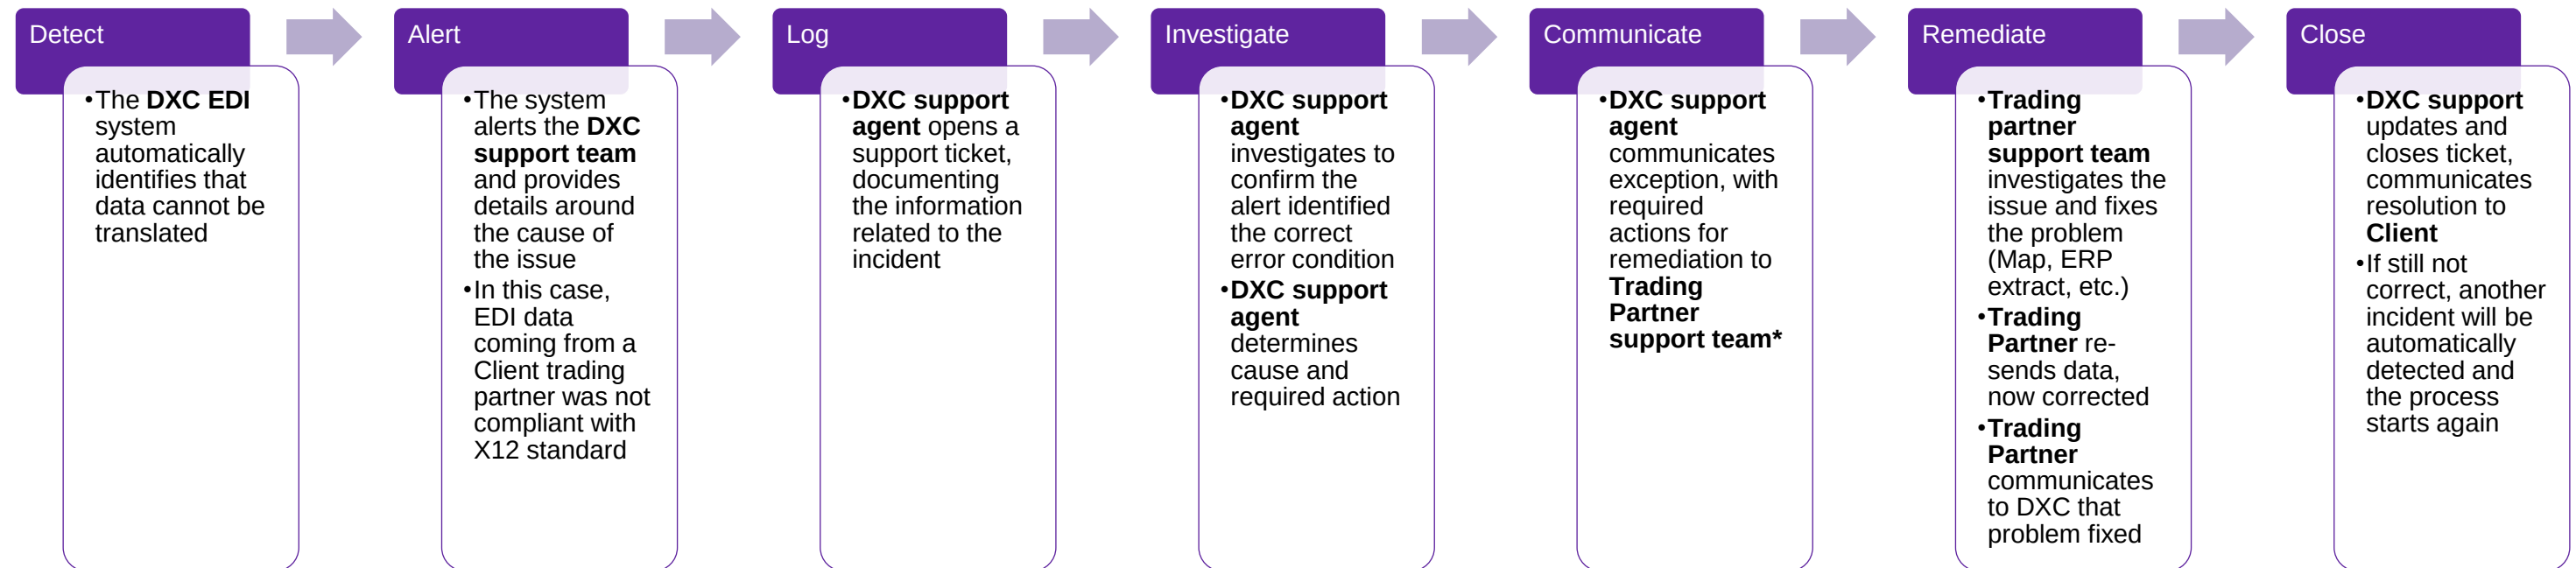

DXC EDI Support Management - Standard Flow

Support Scenario 1: Transaction failed translation due to invalid application data sent by the Client system

Support Scenario 2: Transaction failed translation due to invalid EDI data sent by the Client's Trading Partner system

* DXC can communicate to Client, and let the Client communicate with their trading partner, if preferred by the client

Data Failure Notification Example

From: BES Client Support
Sent: Wednesday, March 02, 2016 9:15 AM
To: johndoe@abcfoods.com
Cc: Bock, Annette; Grondin, Terri; BES Client Support
Subject: BES Ticket Number: 100-01-34376878 2 Mar 2016 McCain Data Failure

Hello,

Business Exchange Services has found an error in the following file. Outlined below are the details of the error. If you have any questions, please feel free to contact us.

BES Ticket Number: 100-01-34376878

Environment: Production

Client: <HPE Client>

Trading Partner Name: ABC Foods
Trading Partner Qualifier/ID: 12/999999999
Transaction Type: 810
Interchange Control Number: 000000170
Group Control Number: 170
Document Control Number: 1700009
Reference Number Data Type: Invoice Number
Reference Number: SOU268304
Date and Time: 2016-03-01 23:11 ET

ERROR TYPE: Trading Partner

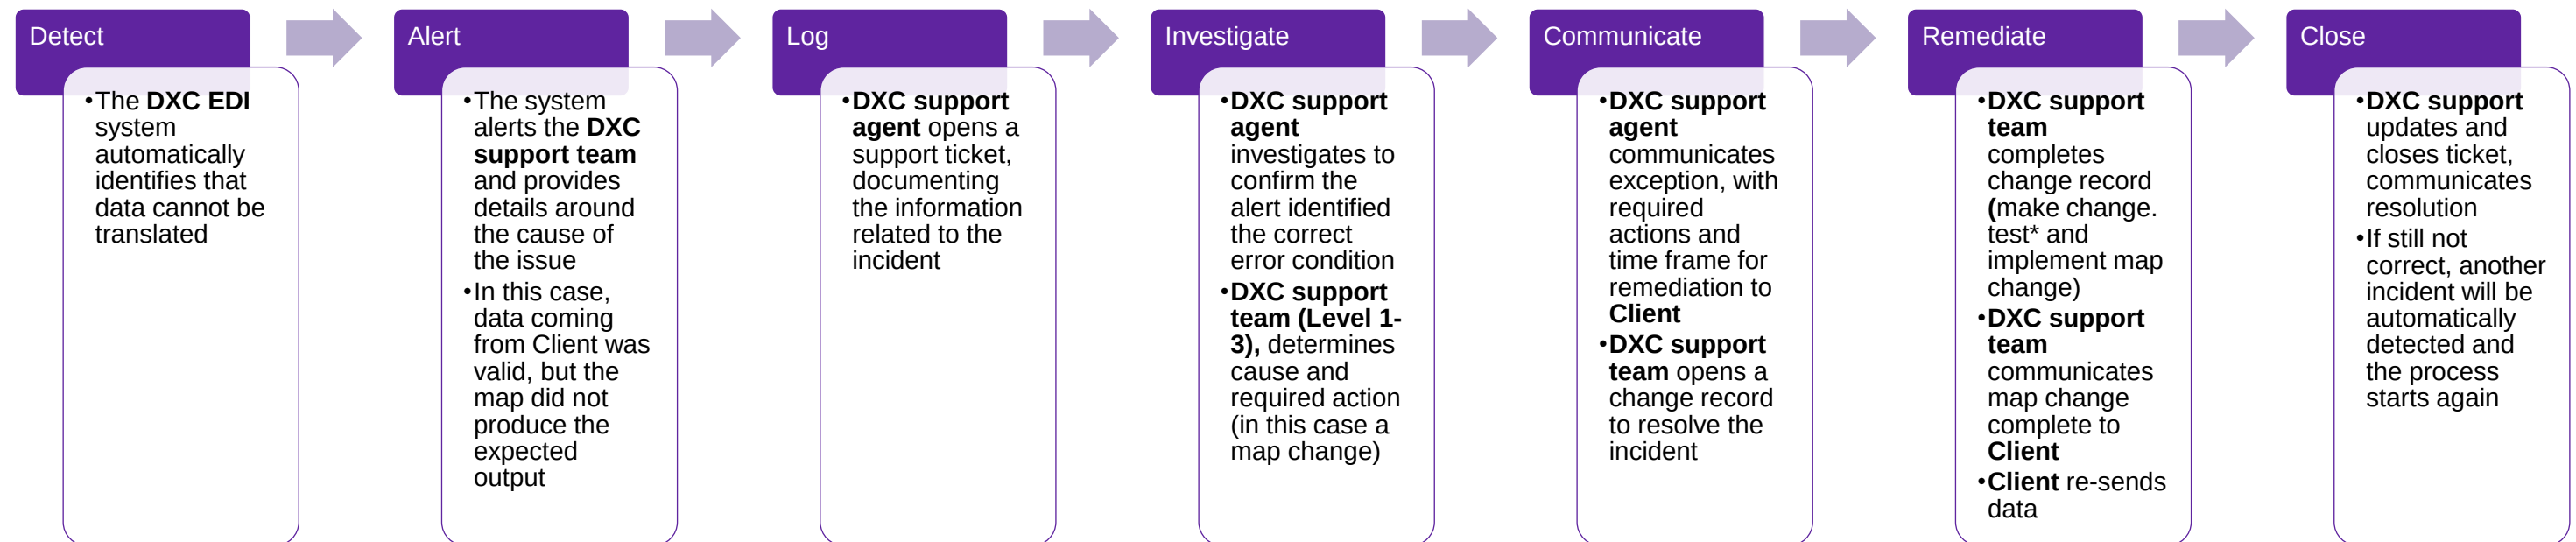

Investigation Details: Mandatory N104 (Identification Code) element value is missing when N101 equals II (Issuer of Invoice) for Invoice SOU268304
Line in error: N1*II*ABC Foods...

Action Required: Please correct the data and resend for translation
Sender's Name: Jenn

Regards,

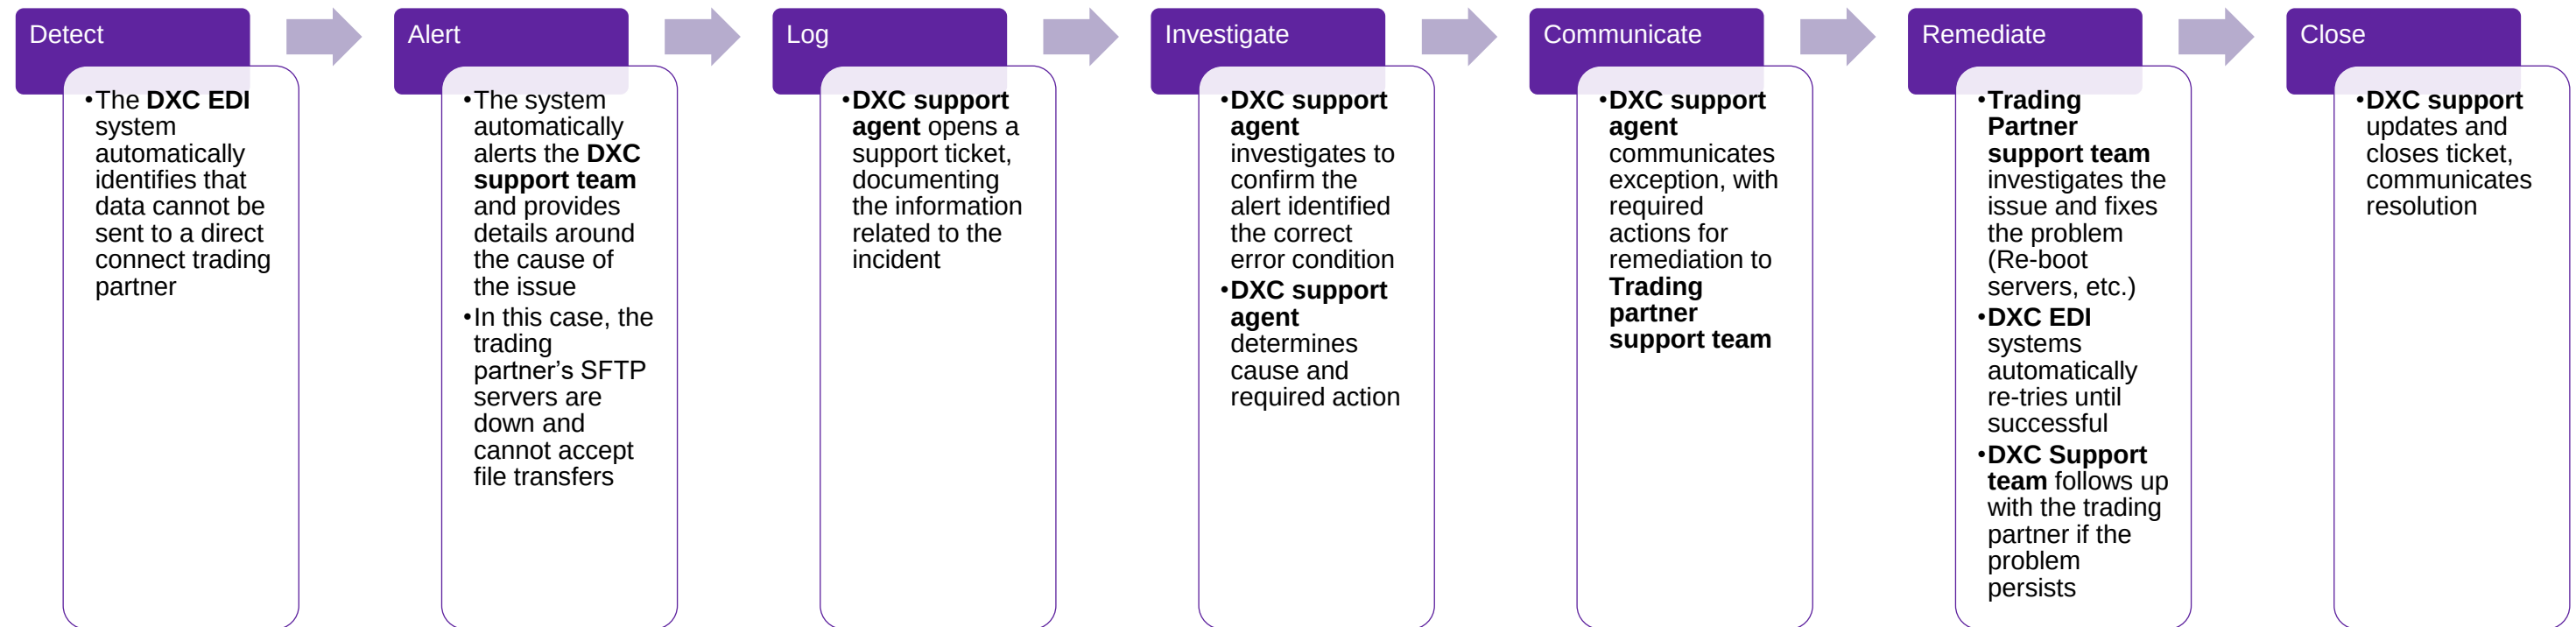

BES Client Support
Business Exchange Services (BES)
Hewlett Packard Enterprise
Email: BESClientSupport@hpe.com

Support Scenario 3: Transaction failed translation, but Client application data is valid – map is not producing expected output

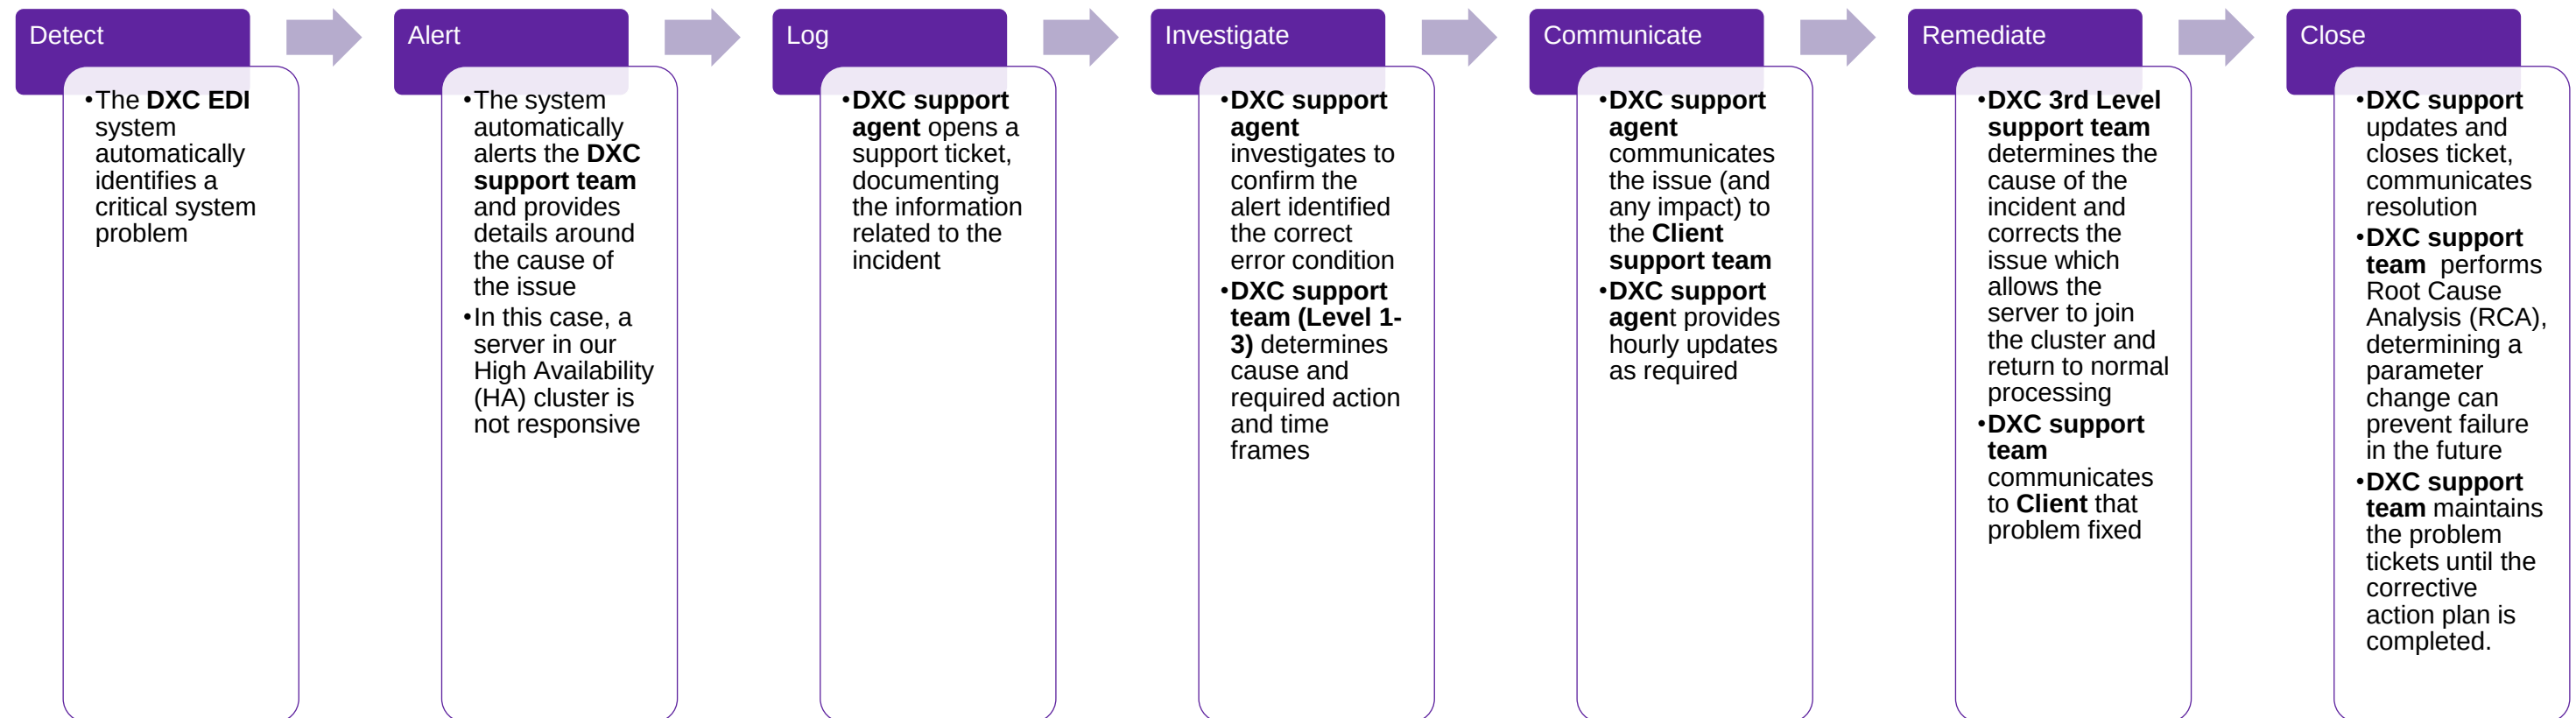

* Depending on the extent of the changes, and other specific circumstances, Client could be involved in the testing as well

Support Scenario 4: Unable to send EDI data to a Client trading partner's SFTP server

Support Scenario 5: DXC EDI server problem (Critical Severity)

NOTE: DXC has not had any Severity 1 or 2 system issues in the last 12 months, but we have processes in place should they happen

DXC Change Management

AGUES **D**ELIVERING EXCELLENCE FOR OUR C
RING **E**XCELLENCE FOR OUR CUSTOMERS AN
R OUR **C**USTOMERS AND COLLEAGUES DELIV

Change Management

- Trading Partner Onboarding and Management
 - New suppliers (mostly using existing maps)
 - New customer implementations (incl. new maps)
- Other Change Management
 - Version upgrades
 - Map changes
 - Connectivity/VAN changes

Trading Partner Onboarding and Management

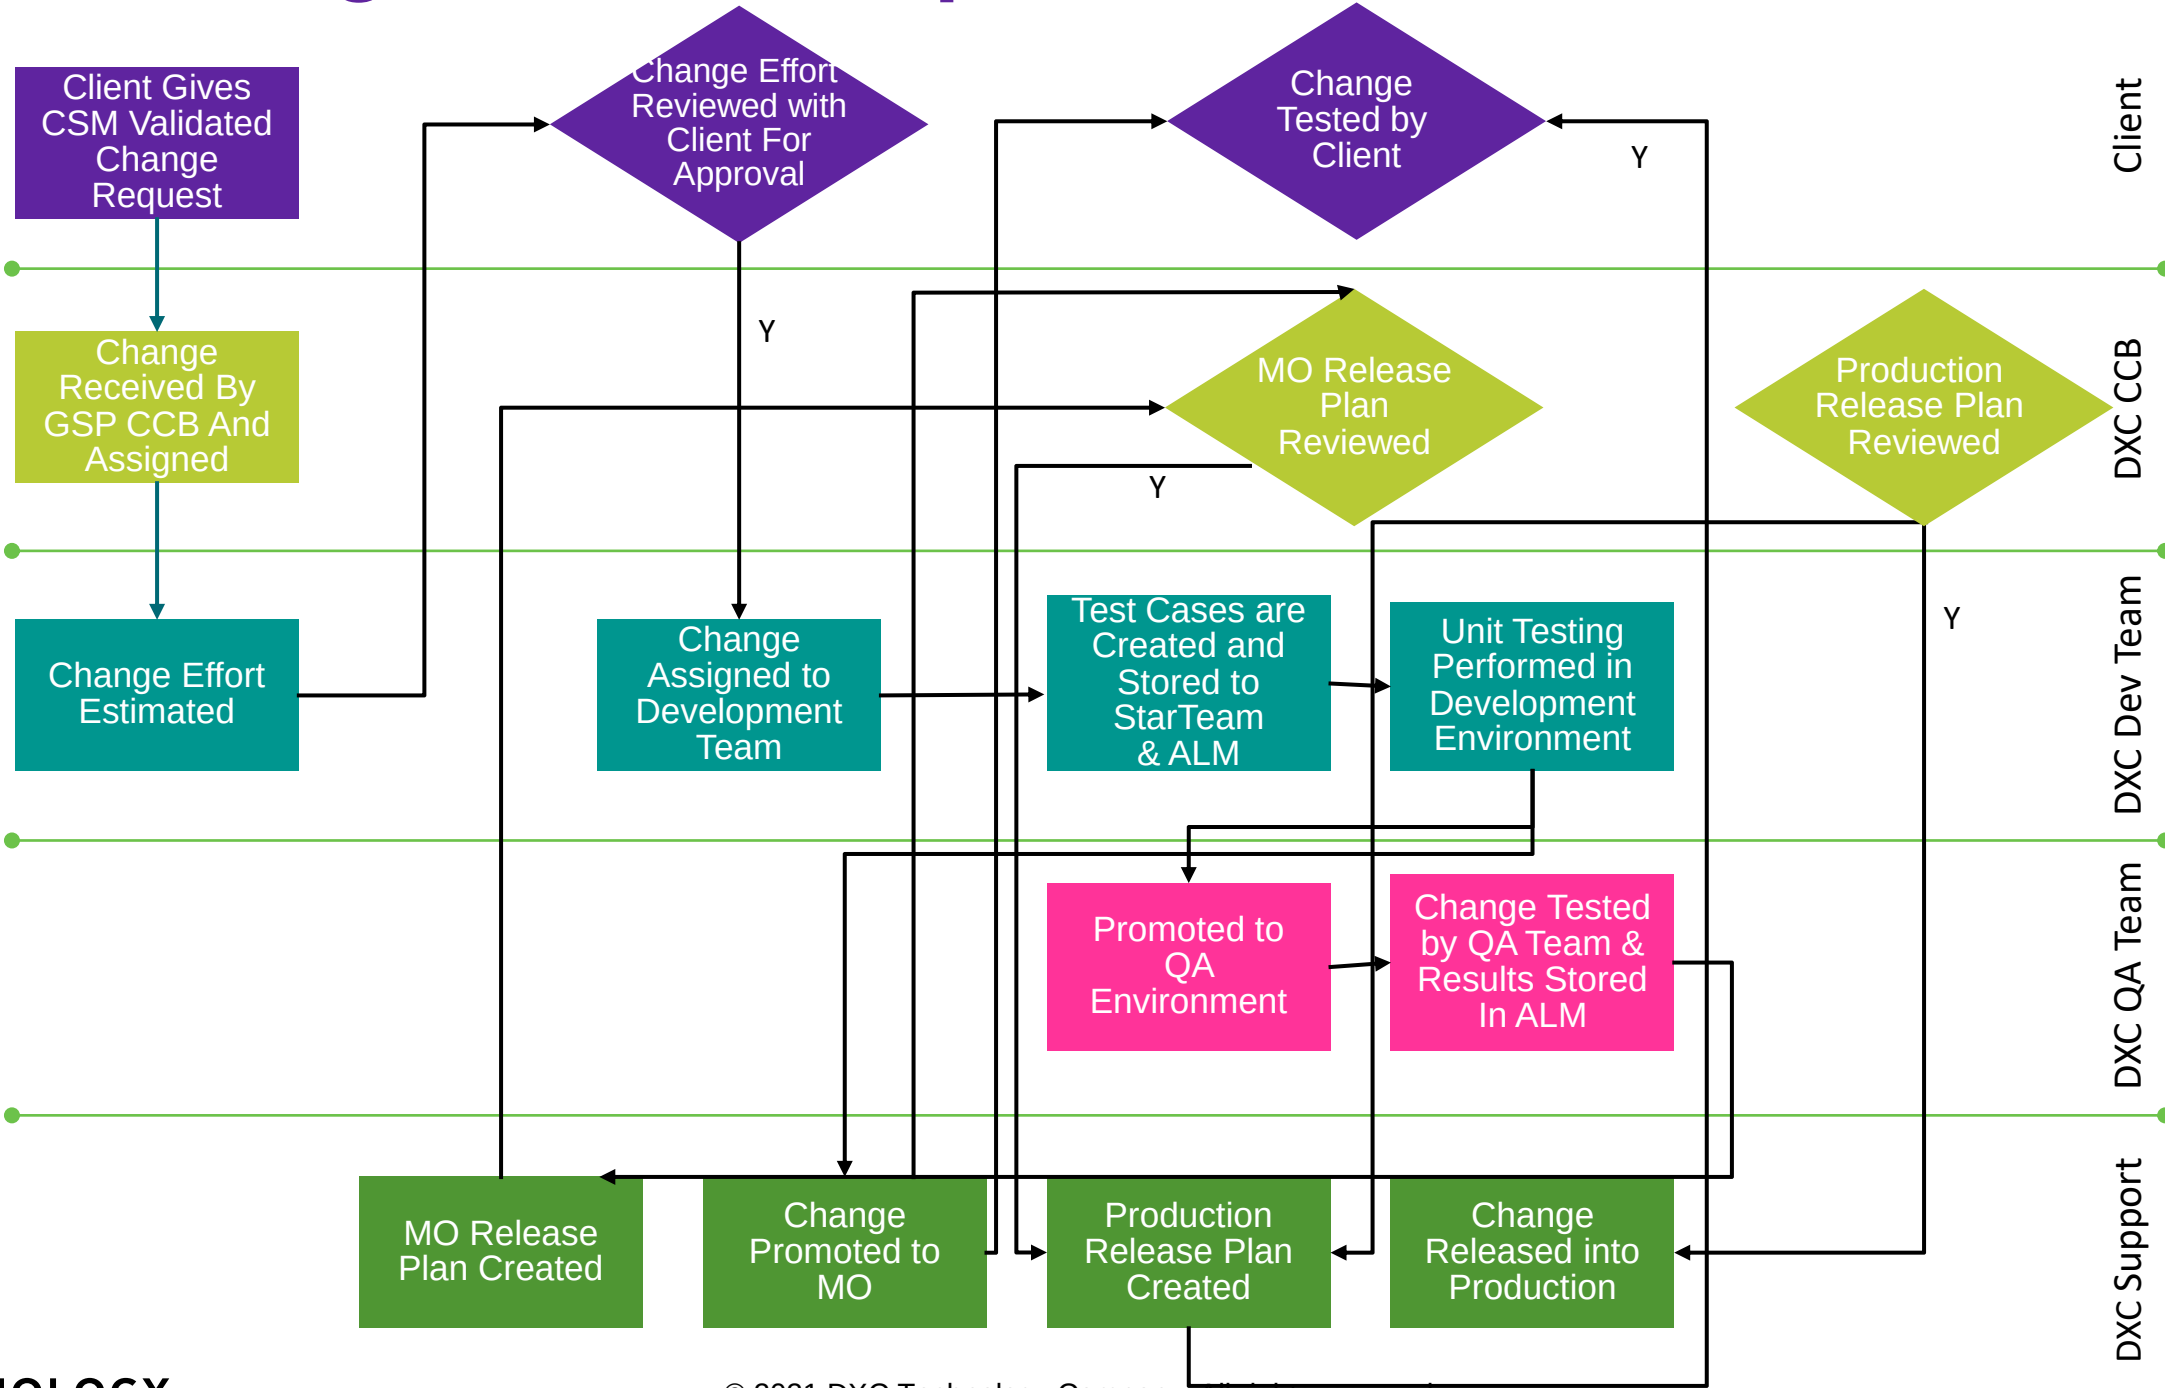

The primary role of the BES Trading Partner Onboarding team is to on-board new trading partners and support existing trading partner connections. All direct connects (AS2 etc.) are handled by this team. The following is provided:

- Primary Onboarding Support Hours: 8:30 am – 5:00 pm (Eastern) Monday through Friday during normal business days. Onboarding Support outside these hours can be provided as needed. Onboarding Support is provided in English.
- Provide on-call Level 2 support 24x7x365 for Severity 1 & 2 production issues, and next business day support for lower severity incidents. Troubleshoot connectivity and transfer issues with trading partners.
- Assist new clients with getting setup on BES MFT for all connection types supported by BES MFT
- Work with the various BES teams to setup the client and Trading Partners on the Managed Service
- Interfaces with network support groups
- Perform connection testing

Change Management

- BES or Client will send a Customer Service Request (CSR) form to the BES CSM representative requesting a change
- BES will scope the solution and provide the Change Control Board (CCB) with a high-level effort estimate for review. If the change request is approved by the CCB, BES will provide a high-level estimate of cost, start time and project duration.
- BES and Client will authorize the CSR work order to start project
- BES will assign resources based on CSR priority and resource availability. BES will adhere to the following phased approach for implementing changes:
 - Phase 1: Requirements Definition
 - Phase 2: Application Integration
 - Phase 3: System Integration Testing (SIT)
 - Phase 4: User / Formal Acceptance Testing (UAT / FAT)
 - Phase 5: Production Implementation and Post-Implementation Monitoring

Change Management – Request Process Flow

DXC EDI Standard Reports

AGUES **D**ELIVERING EXCELLENCE FOR OUR C
RING **E**XCELLENCE FOR OUR CUSTOMERS AN
R OUR **C**USTOMERS AND COLLEAGUES DELIV

DXC Standard Reports

Overdue Acknowledgment Report – this report is generated for outbound EDI translations that have not been reconciled with a corresponding EDI 997. It reports sender/receiver IDs, transaction type/quantity, group control number, document creation date/time and overdue date/time for each document that has not been acknowledged. This report can be emailed or sent via MFT mailbox to client or to trading partner directly

Outbound Status Report – this report is used in conjunction with the Received Acknowledgement Status message. Together these reports allow the client to receive status information from the DXC system to reconcile their outbound transactions with the trading partner's EDI acknowledgement. The report generated for outbound X.12 translations. It reports Envelope control number and translation date and time for each of the successfully translated documents.

Received Acknowledgment Status Report – this report is used in conjunction with the Outbound Status message. Together these reports allow the client to receive status information from the DXC system to reconcile their outbound transactions with the trading partner's EDI acknowledgement. The report generated for each inbound translation session where the input file contains acknowledgment data.

Message Tracking Report – This report is generated after inbound or outbound translations (Application data to EDI data), providing information on each document processed.

SLA report – this report details DXC performance in the previous month as compared to SLA metrics.

Customer Service Request (CSR) Status Report – DXC will provide a CSR Status report to Client. This report will contain a status for all CSRs in the current year (i.e. Active, Hold, etc.), Trading Partner, Transaction, Requested Implementation Date, Description and Amendment History which contains the on-going status and action items. This report is sent prior to the CSR status meetings, or can be requested ad hoc by Client.

Billing/Summary Usage Report – DXC provides a summary of the processing and change usage for the month, and the billing that came as a result of those activities.

Scheduled Maintenance Notification – In the occurrence that we make use of one of the scheduled maintenance windows, a notification is sent to all affected clients

Overdue Acknowledgement Report

This report is generated for outbound EDI translations that have not been reconciled with a corresponding EDI 997. It reports sender/receiver IDs, transaction type/quantity, group control number, document creation date/time and overdue date/time for each document that has not been acknowledged.

Report can be emailed or sent via MFT mailbox to client or to Trading Partner directly

Business Exchange Services (BES)
Managed Service

MAINTENANCE NOTIFICATION

To:	All Managed Service / Global Shared Platform (GSP) Clients
From:	BES Client Service Management
Date:	February 12, 2016
Subject:	BES Emergency Maintenance Notification – Sunday March 20th from 00:00 – 04:00 ET

Maintenance Notification.

This message is issued as a notification that on Sunday March 20th from 00:00 – 04:00 ET there will be maintenance performed on the Business Exchange Services (BES) Managed Service environment. During this period there will be interruption of data processing whilst maintenance activities are completed.

Specific activities will include:

- CR475 Apply Oracle PSU patches to production database. Approximate 4 hour downtime including testing and rollback if necessary.

For risk classification purposes Business Exchange Services have classified this maintenance as medium risk using the classification below:

- Low - No or intermittent service downtime, minor functional or operational change
- Medium - 4 hour service downtime, average functional or operational change
- High - Up to 8 hour service downtime, major functional or operational change
- Critical - Over 8 hour service downtime, major functional or operational change or major architectural change to service
